The City of Rocklin will be the Lead Agency and will prepare an environmental impact report for the project identified below. We need to know the views of your agency as to the scope and content of the environmental information which is germane to your agency's statutory responsibilities in connection with the proposed project. Your agency will need to use the EIR prepared by our agency when considering your permit or other approval for the project.

The project description, location, and the potential environmental effects are contained in the attached materials. A copy of the Initial Study is attached.

Due to the time limits mandated by State law, your response must be sent at the earliest possible date but not later than 30 days after receipt of this notice.

Please send your response to George Djan at the address shown above. We will need the name for a contact person in your agency.

Project Title: Marchbrook-Sunset Ranchos Project – General Plan Amendment, Prezoning, General Development Plan and Annexation.

Project Location: Immediately south of Twelve Bridges plan area, east of Highway 65, northwest of Stanford Ranch plan area, and north and south of Sunset Boulevard.

Project Description: General Plan Amendment, Prezoning, General Development Plan and Annexation.

Date: October 1, 1999

INITIAL STUDY

North West Rocklin General Development Plan
Marchbrook / Sunset Ranchos

I. INTRODUCTION

The City of Rocklin has been presented with a proposal for annexation and development of the area generally bounded by the City of Lincoln to the north, State Route 65 to the west and the adopted Sunset West and Stanford Ranch Community Plan areas to the south and east. This project site is referred to as the North West Rocklin General Development Plan Area. The proposed project includes annexation of the plan area. Development will require amendment of the City of Rocklin General Plan and adoption of the North West Rocklin General Development Plan. The plan area will be initially zoned as Planning Reserve. Subsequent zoning will be commensurate with the proposed general development plan.

The City has determined that an environmental impact report (EIR) will be required. This Initial Study has been prepared to generally describe the proposed project and solicit input from agencies and the public regarding the scope of the forthcoming environmental review. The project description presented in this document is summarized from the *North West Rocklin General Development Plan*, prepared by Terrance E. Lowell & Associates, Inc. (June 16, 1999).

II. PROJECT PROPONENT

City of Rocklin
3970 Rocklin Road
P.O. Box 1380
Rocklin, California 956677

Telephone: 916-632-4020

Contact: Mr. George Djan, AICP.
City of Rocklin Planning Department

III. LOCATION

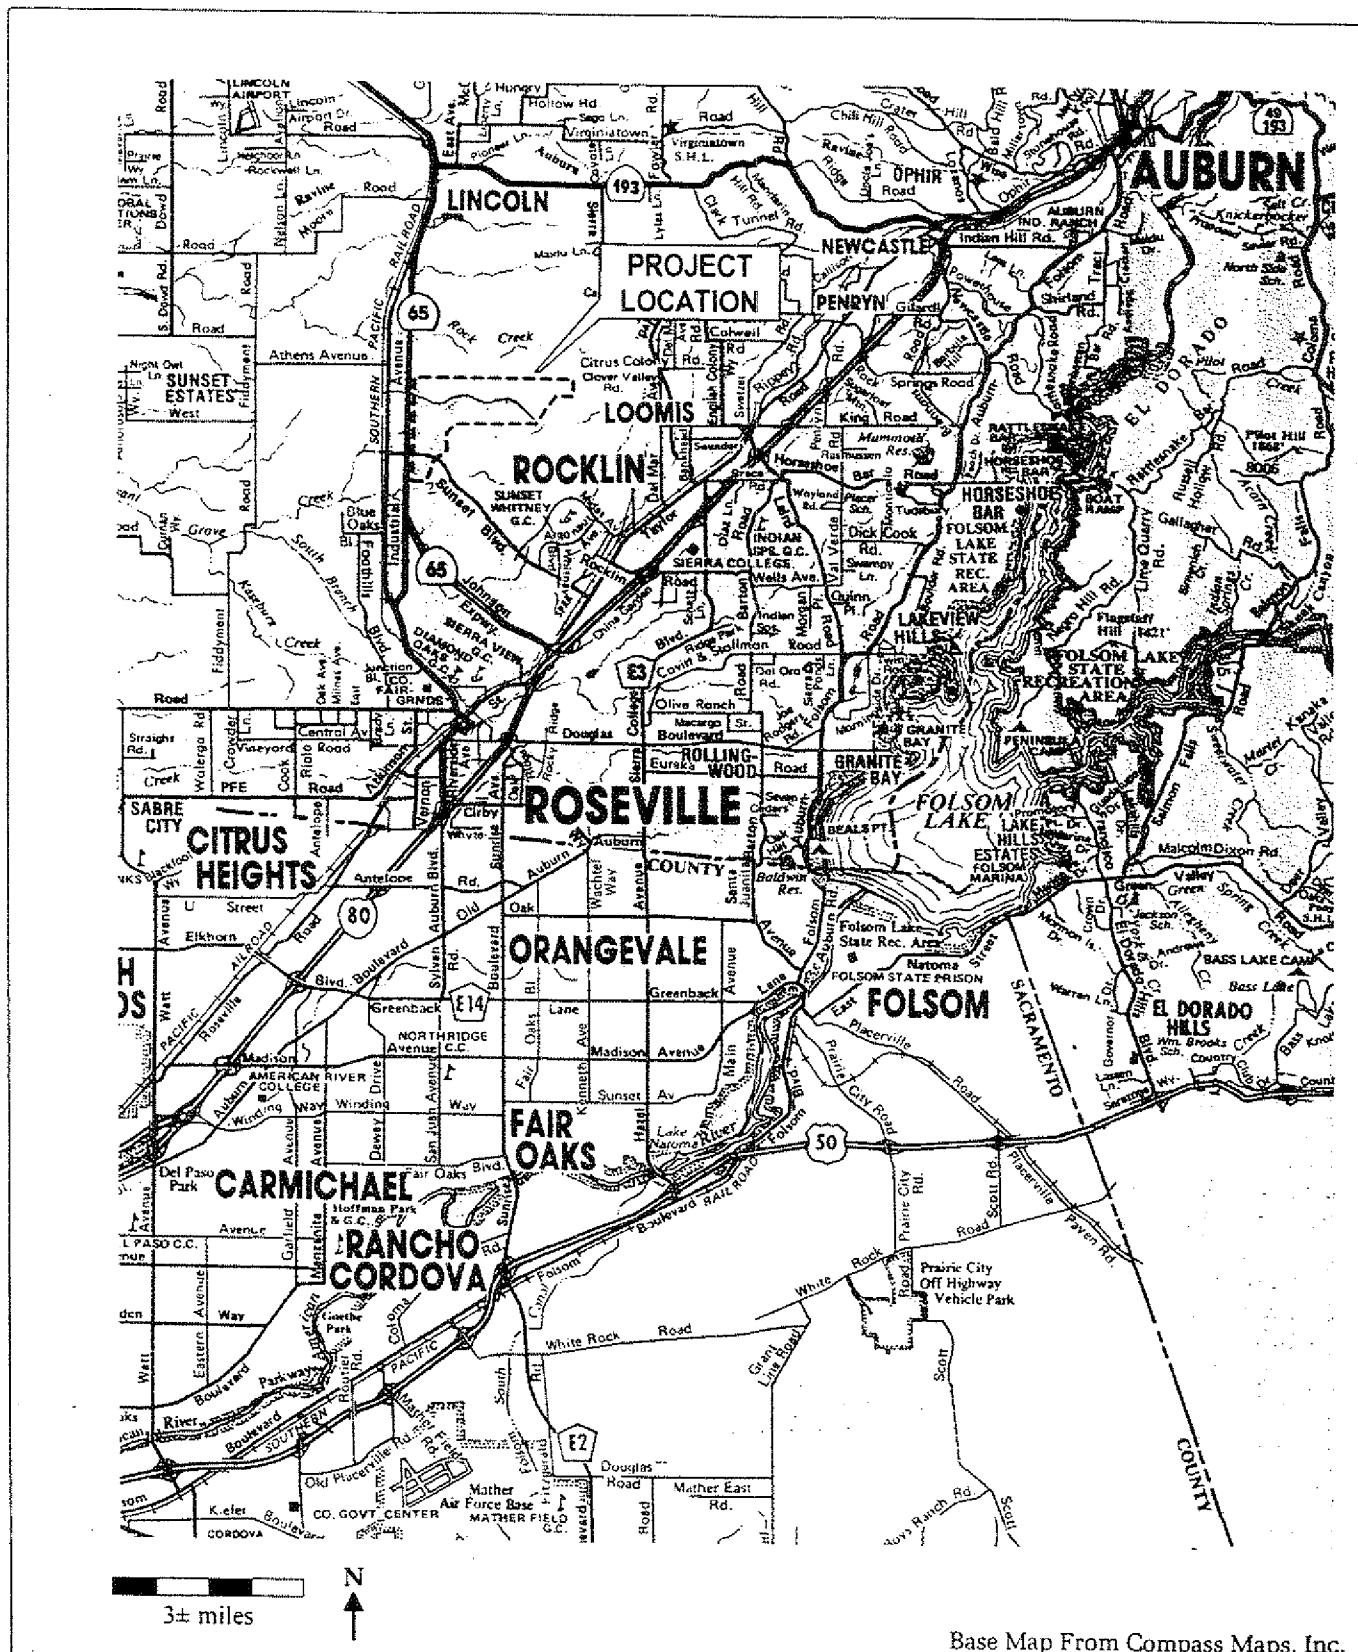

As shown in Figure 1, Location Map, the North West Rocklin General Development Plan area is located in the unincorporated portion of Placer County that is within the sphere of influence (SOI) of the City of Rocklin. The site is contiguous with the Twelve Bridges plan area in the City of Lincoln on the north, State Route 65 on the west, Sunset West and Stanford Ranch in the City of Rocklin to the south, and Whitney Oaks in the City of Rocklin to the east. The project site, which encompasses approximately 1,800 acres, represents the last large undeveloped tract within the City of Rocklin SOI.

IV. PLAN AREA DESCRIPTION

Geology

The predominant geologic material occurring beneath the plan area is Mehrten Formation. Mehrten is a relatively impermeable, weather-resistant geologic material of volcanic origin. Over the course of geologic time, less resistant geologic materials have eroded, leaving the areas underlain by Mehrten formation as ridges overlooking the surrounding terrain. The Mehrten that occurs beneath the plan area is predominantly conglomerate, and not the breccia or mudcap that poses a more significant obstacle to construction. Conglomerate is composed of loosely cemented aggregate and decomposed granite materials. Ripping with a bulldozer is normally sufficient to fracture this material allowing development and emplacement of utilities.

FIGURE 1
PROJECT LOCATION MAP

No significant known faults occur in the immediate vicinity of the plan area. The Cleveland Hills fault (located approximately 40 miles of Lincoln) and the Spenceville fault (approximately 30 minutes northeast of the project location) are considered to be active components of the Foothills Fault Complex. Known inactive faults in the locale include an unnamed fault that extends between Folsom Lake and Rocklin, the Volcano Hill and Linda Creek Faults in the City of Roseville. Unmapped extensions of the Bear Mountain Fault system may extend beneath Folsom Lake to the east. Faults in the vicinity of the plan area have not been identified as requiring evaluation under the provisions of the Alquist-Priolo Earthquake Fault Zoning Act of 1994. As such, the plan area is not subject to any special development standards associated with Alquist-Priolo requirements.

Soils occurring on top of Mehrten tend to be thin and poorly developed, evolving from decomposition of the Mehrten conglomerate. Soils are deeper along drainages where alluvial materials have accumulated.

Topography

The topography of the plan area ranges from steep slopes with well-defined canyons to gently rolling terrain. The most dramatic topography occurs in the northeast portion of the plan area where steep slopes create small valleys and canyons. Conversely, the topography in the western portion of the plan area consists of a strikingly barren landscape created by the relatively gentle slopes of the underlying Mehrten materials. Elevations in the plan area range from approximately 385 feet MSL in the east-northeast, to 140 feet mean sea level (MSL) in the west. Slopes vary from 0% to 30% gradient. About 70% of the plan area supports slopes of 8% or less.

Drainage

The slopes within the plan area define the drainage of the property. Intermittent drainages transect the property. The north and west portions of the plan area generally drain northwest across Highway 65 ultimately discharging to Orchard Creek. Orchard Creek is a tributary to Auburn Ravine. The central portion of the plan area is drained by a seasonal channel that flows west beneath Highway 65 to Orchard Creek. The primary drainage in this area supports a significant wetland area near the western boundary. The southern portion of the plan area discharges across Sunset Boulevard to Pleasant Grove Creek south of Stanford Ranch. These drainages are seasonal and intermittent.

Biological Resources

The biological setting of the plan area is dominated by annual grassland interspersed with concentrations of oak savannah and woodland. Oak trees exist on the periphery of the underlying Mehrten, and in locations where the Mehrten has decomposed to a condition that has allowed the establishment of perennial vegetation. Improved soils and the availability of moisture within the drainages support scattered islands of oaks and willows. The most notable oak woodlands occur in the east and northeast portions of the plan area. Several stock ponds exist in the plan area. These features are filled during the winter season. Some of the ponds are reportedly maintained by ephemeral springs and thus remain wet throughout the summer. The character of these ponds is dominated by riparian vegetation including willows, cattails and sedges.

V. PROJECT DESCRIPTION

1. Land Use

The proposed land uses are presented in the General Plan Land Use Diagram (Figure 2) and in the General Development Plan Zoning Diagram (Figure 3). The North West Rocklin General Development Plan consists of three project areas: Marchbrook-Sunset Ranchos, Highway 65 Corridor, and Parcel K. Marchbrook Sunset Ranchos project is the largest of the projects, encompassing approximately $1,300 \pm$ acres. The Marchbrook Sunset Ranchos project is a planned community that would include 3,423 single-family lots, 1,066 multi-family units, three 10-acre elementary schools sites, 64 acres of park sites, 190 acres of open space, and 24 acres of neighborhood commercial and community commercial uses.

The Highway 65 Corridor consists of $500 \pm$ acres of existing and vacant property zoned for business professional/commercial/industrial uses such as Herman Miller and the Atherton Technical Center. Consistent with the neighboring Sunset Industrial Area (SIA), the western portion of the plan area will remain designated for commercial, light industrial, and/or business-professional land uses.

Parcel K includes $47 \pm$ acres proposed for the development of 113 single-family residential detached dwellings. Planning for development of this parcel has been ongoing for some time, and it is possible that annexation and development of Parcel K could occur as a separate action prior to consideration of the North West Rocklin General Development Plan as a whole.

2. Circulation

The circulation system is proposed to provide internal circulation and will complete an essential connection between the City of Rocklin and Highway 65. This connection will be needed to relieve traffic pressures on Sunset Boulevard that currently provides the only major connection between the western portion of the City and Highway 65. The proposed roadway system includes connections to the neighboring Stanford Ranch and Twelve Bridges communities.

3. Infrastructure & Utilities

Water and sewer connections are available at various locations on the perimeter of the plan area. The plan area is within the service area of PCWA. Sanitary sewer services are provided to the vicinity by South Placer Municipal Utility District. Police service is currently provided by the Placer County Sheriff's Department and the California Highway Patrol (CHP). Following annexation, the Rocklin Police Department will provide law enforcement services. Similarly, the Consolidated Fire District (CFD) currently provides fire protection services. The Rocklin Fire Department will provide fire protection services following annexation. The Auburn Placer Disposal Service, under contract to the City of Rocklin, will provide solid waste disposal to the plan area. Refuse is disposed of at the Western Regional Sanitary Landfill located on Fiddymont Road approximately three miles west of the City of Rocklin. Pacific Gas and Electric Company (PG&E) provides natural gas and electric service to the vicinity.

VI. PROJECT ENTITLEMENTS AND PERMITS

The EIR will serve as the principal disclosure document for the environmental effects associated with proposed annexation and development of the lands within the North West Rocklin General Development Plan. This document will assist government agencies in their decision to issue the following approvals and/or permits as may be required to implement the project. Although the following list is intended to be complete, it is possible that additional requirements may be identified during environmental review process.

- Certification of the Environmental Impact Report City of Rocklin
- Reorganization (Annexation/Detachment) Placer County Local Agency Formation Commission (LAFCO)
- Approval of General Plan Land Use
Designations and Prezoning City of Rocklin
- Approval of Large Lot Tentative Map(s) City of Rocklin
- Approval of Tentative Subdivision Map(s) for
Marchbrook Sunset Ranchos City of Rocklin
- Approval of Final Subdivision Map(s) for
Marchbrook Sunset Ranchos City of Rocklin
- Improvement Plans City of Rocklin
- Encroachment Permits City of Rocklin and Caltrans
- Oak Tree Preservation Plan City of Rocklin
- National Pollutant Discharge Elimination
System Stormwater Discharge Permit California Regional Water Quality Board
- Section 404 of the Clean Water Act U.S. Army Corps of Engineers
- Streambed Alteration Agreement California Department of Fish and Game
- Endangered / Threatened Species (potential) California Department of Fish and Game and U.S.
Fish and Wildlife Service
- Annexation as may be required into the
various utility districts serving the vicinity Utility Districts (to be determined)

ENVIRONMENTAL CHECKLIST

CEQA GUIDELINES APPENDIX G ENVIRONMENTAL CHECKLIST FORM

1. Project Title: North West Rocklin General Development Plan / Marchbrook Sunset Ranchos
2. Lead Agency Name and Address: City of Rocklin
3. Contact Person and Phone Number: George Dian, AICP, Rocklin Community Development Department
4. Project Location: The North West Rocklin General Development Plan area is located in the unincorporated area of Placer County that is within the sphere of influence (SOI) of the City of Rocklin. The site is contiguous with the Twelve Bridges Specific Plan area in the City of Lincoln on the north, State Route 65 on the west, Sunset West and Stanford Ranch in the City of Rocklin to the south, and Whitney Oaks in the City of Rocklin to the east. The project site, which encompasses approximately 1,800 acres, represents the last large undeveloped tract within the City of Rocklin SOI.
5. Project Sponsor's Name and Address: Steve Spain
Terrance E. Lowell & Associates
1628 Eureka Road
Roseville, CA 95677
6. General Plan Designation: Planning Reserve
7. Zoning: Planning Reserve
8. Description of Project: (Describe the whole action involved, including but not limited to later phases of the project, and any secondary, support, or off-site features necessary for its implementation. Attach additional sheets if necessary)

Please refer to the attached Initial Study. The North West Rocklin General Development Plan includes annexation of 1,800± acres into the City of Rocklin. Established land uses include Herman Miller, Atherton Tech Center, and two residences. The Marchbrook-Sunset Ranchos (MSR) project encompasses approximately 1,300 +/- acres within the North West Rocklin General Development Plan area. Proposed development of the MSR project includes 3,423 single-family lots, 1,066 multi-family units, three 10-acre elementary schools sites, 64 acres of park sites, 190 acres of open space, and 24 acres of neighborhood commercial.
9. Surrounding Land Uses and Setting: Briefly describe the project's surroundings:

Stanford Ranch and Whitney Oaks are communities within the City of Rocklin. The predominant land use is residential supported by community amenities such as schools, parks, and neighborhood business-professional and commercial uses. The area to the south is within the City of Rocklin, but notable uses along Sunset Boulevard include business professional and light industrial use. The Sunset West Community Plan has been adopted in the area between Sunset Boulevard and the City of Rocklin. Highway 65 is the western boundary of the proposed annexation. Atherton Tech Center and the Herman Miller furniture manufacturing plant are located east of Highway 65 within the area to be annexed. The Placer County Sunset Industrial Area (SIA) extends along the west side of Highway 65. The Roseville North Industrial area is located south and west of the Placer County SIA. The area north of the project is within the City of Lincoln and has been approved for development as the Twelve Bridges community. The majority of the Twelve Bridges community is residentially oriented, but nonresidential land uses are included, notably along Highway 65.

10. Other public agencies whose approval is required (e.g., permits, financing approval, or participation agreement.)

The City of Rocklin will be the CEOA Lead Agency responsible for the annexation, assignment of land use designations and zoning, and ultimate development of the plan area. The Placer County Local Area Formation Commission (LACFO) will be responsible for approving the proposed annexation, including the change in service areas for various service providers. A Section 404 wetland permit will be required from the US Army Corps of Engineers and a Section 401 Water Quality Certification will be required from the Regional Water Quality Control Board. Issuance of a Stream Alteration Agreement may be required from the California Department of Fish and Game (DFG). A permit will be required from the US Fish and Wildlife Service (USFWS) for mitigation of potential impacts to elderberry shrubs that exist within the plan area. Formal consultation with the USFWS would be accomplished by the USACE as a component of the Section 404 process. Additional agencies with jurisdiction over the project may be identified during the environmental review process.

ENVIRONMENTAL FACTORS POTENTIALLY AFFECTED:

The environmental factors checked below would be potentially affected by this project, involving at least one impact that is a "Potentially Significant Impact" as indicated by the checklist on the following pages.

<input checked="" type="checkbox"/> Aesthetics	<input type="checkbox"/> Agriculture Resources	<input checked="" type="checkbox"/> Air Quality
<input checked="" type="checkbox"/> Biological Resources	<input checked="" type="checkbox"/> Cultural Resources	<input checked="" type="checkbox"/> Geology/Soils
<input type="checkbox"/> Hazards/Hazardous Materials	<input checked="" type="checkbox"/> Hydrology/Water Quality	<input checked="" type="checkbox"/> Land Use/Planning
<input type="checkbox"/> Mineral Resources	<input checked="" type="checkbox"/> Noise	<input checked="" type="checkbox"/> Population/Housing
<input checked="" type="checkbox"/> Public Services	<input checked="" type="checkbox"/> Recreation	<input checked="" type="checkbox"/> Transportation/Planning
<input checked="" type="checkbox"/> Utilities/Service Systems	<input checked="" type="checkbox"/> Mandatory Findings of Significance	

DETERMINATION (To be completed by the Lead Agency.)

On the basis of this initial evaluation:

- I find the proposed project COULD NOT have a significant effect on the environment, and a NEGATIVE DECLARATION will be prepared.
- I find that although the proposed project could have a significant effect on the environment, there will not be a significant effect in this case because the mitigation measures described on the attached pages have been added to the project. A NEGATIVE DECLARATION will be prepared.
- I find the proposed project MAY have a significant effect on the environment, and an ENVIRONMENTAL IMPACT REPORT is required.
- I find that although the proposed project could have a significant effect on the environment, there WILL NOT be a significant effect in this case because all potentially significant effects (a) have been analyzed adequately in an earlier EIR pursuant to applicable standards and (b) have been avoided or mitigated pursuant to that earlier EIR, including revisions or mitigation measures that are imposed upon the proposed project.

Signature

Date

Printed Name

For

	Potentially Significant Impact	Less Than Significant With Mitigation Incorporation	Less Than Significant Impact	No Impact
I. AESTHETICS. Would the project:				
a) Have a substantial adverse effect on a scenic vista?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
	<i>Implementation of the proposed General Development Plan will significantly alter the visual characteristics of the area, transforming the plan area from undeveloped to that of an urban setting.</i>			
b) Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
	<i>The plan area does not lie within the viewshed of a designated State Scenic Highway.</i>			
c) Substantially degrade the existing visual character or quality of the site and its surroundings?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
	<i>See Response I.a) above.</i>			
d) Create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
	<i>See Response I.a) above.</i>			
II. AGRICULTURAL RESOURCES: In determining whether impacts to agricultural resources are significant environmental effects, lead agencies may refer to the California Agricultural Land Evaluation and Site Assessment Model (1997) prepared by the California Dept. of conservation as an optional model to use in assessing impacts on agriculture and farmland. Would the project:				
a) Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
	<i>The plan area does not support prime farmland.</i>			
b) Conflict with existing zoning for agricultural use, or a Williamson Act contract?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
	<i>Portions of the plan area would be rezoned from Planning Reserve (Agricultural) to urban uses. However, significant farming activities are not practiced within the plan area and none of the parcels are under Williamson Act contract.</i>			

	Potentially Significant Impact	Less Than Significant With Mitigation Incorporation	Less Than Significant Impact	No Impact
c) Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
<i>See response II.b) above.</i>				
III. AIR QUALITY. Where available, the significance criteria established by the applicable air quality management or air pollution control district may be relied upon to make the following determinations. Would the project:				
a) Conflict with or obstruct implementation of the applicable air quality plan?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<i>The proposed project represents a significant level of urban development that could exacerbate an existing nonattainment status or result in local violation of adopted air quality standards</i>				
b) Violate any air quality standard or contribute substantially to an existing or projected air quality violation?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<i>See response to III.a) above.</i>				
c) Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is nonattainment under an applicable federal or state ambient air quality standard (including releasing emissions which exceed quantitative thresholds for ozone precursors)?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<i>See response to III.a) above.</i>				
d) Expose sensitive receptors to substantial pollutant concentrations?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<i>Review of proposed land uses and sensitive receptors in proximity to significant new intersections may be warranted.</i>				
e) Create objectionable odors affecting a substantial number of people?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
<i>None of the land uses envisioned by the Plan are anticipated to generate objectionable odors. Evaluation of future Light Industrial uses can only be evaluated on a project-by-project basis.</i>				

	Potentially Significant Impact	Less Than Significant With Mitigation Incorporation	Less Than Significant Impact	No Impact
--	--------------------------------	---	------------------------------	-----------

VII. BIOLOGICAL RESOURCES. Would the project:

- a) Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or US Fish and Wildlife Service?

Development of the plan area would transform undeveloped area into an urban setting, resulting in a reduction in habitat and displacement of wildlife. The EIR will evaluate potential impacts to biological resources.

- b) Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Game or US Fish and Wildlife Service.

See response to VII.a) above.

- c) Have a substantial adverse effect on federally protected wetlands as defined by Section 404 of the Clean Water Act (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?

A wetland delineation has been performed and submitted to the Corps of Engineers. The EIR will evaluate potential impacts to wetland resources.

- d) Interfere substantially with the movement of any native resident or migratory fish or wildlife species on with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?

The proposed land use plan maintains the natural drainages within the plan area. No significant migratory routes have been identified through the plan area. The EIR will address this issue.

- e) Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?

The proposed project will comply with adopted policies and ordinances. No conflict is envisioned. The EIR will address this issue.

	Potentially Significant Impact	Less Than Significant With Mitigation Incorporation	Less Than Significant Impact	No Impact
f) Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

The plan area is not within an adopted HCP or other adopted conservation plan. The plan area is identified in the Placer Legacy Open Space project currently being implemented by Placer County.

V. CULTURAL RESOURCES. Would the project:

- a) Cause a substantial adverse change in the significance of a historical resource as defined in §15064.5?

The EIR will evaluate potential impacts to cultural resources within the plan area.

- b) Cause a substantial adverse change in the significance of an archaeological resource pursuant to §15064.5?

See response to V.a) above.

- c) Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?

The plan area is underlain by granite and decomposed Mehrten conglomerate. These materials are not known to yield significant fossilized materials. Years of development in adjoining Stanford Ranch has not yielded any significant fossils. The potential for fossils to exist in this area is considered highly unlikely.

- d) Disturb any human remains, including those inferred outside of formal cemeteries?

No human remains or interments are known to exist in the plan area.

	Potentially Significant Impact	Less Than Significant With Mitigation Incorporation	Less Than Significant Impact	No Impact
VI. GEOLOGY AND SOILS. Would the project:				
a) Expose people or structures to potential substantial adverse effects, including the risk of loss, injury, or death involving:				
i. Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area of based on other substantial evidence of a known fault? Refer to Div. of Mines and Geology Special Publication 42.	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<i>The plan area is not within a designated fault zone. However, groundshaking is likely to occur as a consequence of regional seismic activity. Implementation of UBC standards is proposed. This issue will be addressed in the EIR.</i>				
ii. Strong seismic ground shaking?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<i>See response VI.a)i. above.</i>				
iii. Seismic-related ground failure, including liquefaction?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<i>Development is not proposed on severe slopes. Soil and geologic materials in the plan area are not particularly prone to instability, liquefaction or landsliding. Geotechnical evaluation will be required prior to adoption of tentative maps and/or prior to issuance of building permits. This issue will be addressed in the EIR</i>				
iv. Landslides?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<i>See response VI.a)iii. Above</i>				
b) Result in substantial soil erosion or the loss of topsoil?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<i>Construction activities, including grading and trenching, will produce elevated risk of erosion and consequent sedimentation. Erosion control practices and BMP's will be implemented to minimize this impact. This issue will be addressed in the EIR.</i>				
c) Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<i>See response VI.a)iii. Above</i>				

	Potentially Significant Impact	Less Than Significant With Mitigation Incorporation	Less Than Significant Impact	No Impact
d) Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial risks to life or property?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
	<i>Mehrten materials that underlie the plan area are not recognized as highly expansive. Expansive clays do occur in the vicinity, but are predominantly confined to locations beyond the Mehrten and along drainages.</i>			
e) Have soils incapable of adequately supporting the use of septic tanks or alternative waste water disposal systems where sewers are not available for the disposal of waste water?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

The proposed project would rely on municipal wastewater collection and treatment.

VII. HAZARDS AND HAZARDOUS MATERIALS.

Would the project:

- a) Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?

Adoption of the General development Plan would not pose any significant hazard to the public or the environment. Construction would involve the short-term use of hazardous materials such as diesel fuel, grease, etc. The use of hazardous materials by future land uses would be subject to review and/or permitting by the City of Rocklin Fire Department on a case-by-case basis. The EIR will address this issue as it pertains to adoption of the plan.

- b) Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?

The proposed project is not envisioned to create an elevated risk of upset producing a significant hazard to the public or environment. Transport of hazardous materials through the City is subject to regulation.

- c) Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?

The land use plan provides adequate separation between the light industrial areas and existing/proposed new schools.

	Potentially Significant Impact	Less Than Significant With Mitigation Incorporation	Less Than Significant Impact	No Impact
d) Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
<i>The plan area is not a hazardous materials site.</i>				
e) For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard for people residing or working in the project area?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
<i>The plan area is not within two miles of an airport.</i>				
f) For a project within the vicinity of a private airstrip, would the project result in a safety hazard for people residing or working in the project area?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<i>See response to VII.e) above.</i>				
g) Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
<i>Implementation of the project would not impair or interfere with an adopted emergency response or evacuation plan.</i>				
h) Expose people or structures to a significant risk of loss, injury or death involving wildland fires, including where wildlands are adjacent to urbanized areas or where residences are intermixed with wildlands?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
<i>The plan area is surrounded by development and/or areas approved for urban land use. The site does not support any significant forested area. Consequently, the project would not expose people or structures to elevated risk of wildland fire.</i>				

VIII. HYDROLOGY AND WATER QUALITY. Would the project:

- a) Violate any water quality standards or waste discharge requirements?
- The proposed project includes construction that will increase the short-term risk of contamination and sedimentation. Urban land uses will become long-term potential sources of pollution.*

	Potentially Significant Impact	Less Than Significant With Mitigation Incorporation	Less Than Significant Impact	No Impact
b) Substantially deplete groundwater supplies or interfere substantially with groundwater recharge such that there would be a net deficit in aquifer volume or a lowering of the local groundwater table level (e.g., the production rate of pre-existing nearby wells would drop to a level which would not support existing land uses or planned uses for which permits have been granted)?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
<i>Plan area would rely on municipal water sources.</i>				
c) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, in a manner which would result in substantial erosion or siltation on- or off-site?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
<i>The land use plan protects the principal drainages within the plan area. Runoff will continue to be discharged to the same watersheds as pre-project conditions.</i>				
d) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, or substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or off-site?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<i>See response VIII.c) above. The project proposes detention within the plan area sufficient to maintain pre-project peak hour discharge levels.</i>				
e) Create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<i>See responses VIII.a) and VIII.c) above.</i>				
f) Otherwise substantially degrade water quality?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
<i>See response VIII.a) above. Aside from the inherent change in runoff associated with urban development, no other notable long-term potential sources of pollution have been identified.</i>				
g) Place housing within a 100-year flood hazard area as mapped on a federal Flood Hazard Boundary or Flood Insurance Rate Map or other flood hazard delineation map?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
<i>The project does not propose the construction of housing within a 100-year floodplain.</i>				

	Potentially Significant Impact	Less Than Significant With Mitigation Incorporation	Less Than Significant Impact	No Impact
h) Place within a 100-year flood hazard area structures which would impede or redirect flood flows?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
<i>The project includes onsite channel crossings and detention facilities as warranted. These facilities will be designed to maintain pre-project peak discharge conditions and will not cause flooding.</i>				
i) Expose people or structures to a significant risk of loss, injury or death involving flooding, including flooding as a result of the failure of a levee or dam?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
<i>See response VIII.i) above. There are no levees or dams that protect the plan area. Onsite dams are limited to a couple small features associated with small stock ponds.</i>				
j) Inundation by seiche, tsunami, or mudflow?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
<i>The plan area is not susceptible to seiche, or tsunami. Soils on the site are not known to be susceptible to mudflow.</i>				
IX. LAND USE AND PLANNING. Would the project:				
a) Physically divide an established community?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
<i>The plan area is the last significant undeveloped area within the City of Rocklin. The plan area does not divide a community.</i>				
b) Conflict with any applicable land use plan, policy, or regulation of an agency with jurisdiction over the project (including, but not limited to the general plan, specific plan, local coastal program, or zoning ordinance) adopted for the purpose of avoiding or mitigating an environmental effect?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<i>The project includes annexation, amendment of the Rocklin General Plan and adoption of zoning.</i>				
c) Conflict with any applicable habitat conservation plan or natural community conservation plan?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
<i>The project is consistent with the Open space zoning requirements of the City of Rocklin. The plan area is identified in the Placer Legacy Open Space project currently being implemented by Placer County. The City of Rocklin is not required to participate in that program, but may choose to do so during review of the project.</i>				

Potentially Significant Impact	Less Than Significant With Mitigation Incorporation	Less Than Significant Impact	No Impact
--------------------------------	---	------------------------------	-----------

X. MINERAL RESOURCES. Would the project:

- a) Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?

<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
--------------------------	--------------------------	-------------------------------------	--------------------------

No. The project site does not support significant mineral resources. Mehrten can be a source of aggregate, but the site does not contain any significant amount of high quality material. Based on observations from the Stanford Ranch project, the decomposed Mehrten may be a source for marginal quality gravel. However, the proximity of urban development likely precludes extraction of that material.

- b) Result in the loss of availability of a locally-important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan?

<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
--------------------------	--------------------------	-------------------------------------	--------------------------

See response X.a) above.

XI. NOISE. Would the project result in:

- a) Exposure of persons to or generation of noise levels in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?

<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
-------------------------------------	--------------------------	--------------------------	--------------------------

The proposed community will be a source of urban noises and the location of new receptors. Traffic is anticipated to be the most significant noise issue. The proximity of light industrial uses could pose additional noise concerns. Noise will be evaluated in the Draft EIR.

- b) Exposure of persons to or generation of excessive groundborne vibration or groundborne noise levels?

<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
--------------------------	--------------------------	-------------------------------------	--------------------------

With the exception of regulated short-term construction activities, the project will not produce significant groundborne vibration or noise.

- c) A substantial permanent increase in ambient noise levels in the project vicinity above levels existing without the project?

<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
-------------------------------------	--------------------------	--------------------------	--------------------------

The project proposes transformation of an undeveloped area to an urban setting. Noise impacts will be evaluated in the Draft EIR.

	Potentially Significant Impact	Less Than Significant With Mitigation Incorporation	Less Than Significant Impact	No Impact
d) A substantial temporary or periodic increase in ambient noise levels in the project vicinity above levels existing without the project?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<i>See XI.c) above.</i>				
e) For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
<i>The plan area is not within two miles of an airport.</i>				
f) For a project within the vicinity of a private airstrip, would the project expose people residing or working in the project area to excessive noise levels?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
<i>There are no known private airstrips within two miles of the plan area.</i>				
XII. POPULATION AND HOUSING. Would the project:				
a) Induce substantial population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<i>The project is a proposal to annex undeveloped area into the City of Rocklin, including assignment of General Plan and zoning designations to allow future development. This issue will be examined in the EIR.</i>				
b) Displace substantial numbers of existing housing, necessitating the construction of replacement housing elsewhere?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
<i>The Plan area is essentially undeveloped. There are two existing homes within the Plan Area. They are not proposed to be removed.</i>				
c) Displace substantial numbers of people, necessitating the construction of replacement housing elsewhere?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
<i>See response XII.b) above.</i>				

Potentially Significant Impact	Less Than Significant With Mitigation Incorporation	Less Than Significant Impact	No Impact
--------------------------------	---	------------------------------	-----------

XIII. PUBLIC SERVICES

- a) Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services:

Fire protection?

<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
-------------------------------------	--------------------------	--------------------------	--------------------------

The EIR will evaluate the availability of fire protection to serve proposed development.

Police protection?

<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
-------------------------------------	--------------------------	--------------------------	--------------------------

The EIR will evaluate the availability of law enforcement to serve proposed development.

Schools?

<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
-------------------------------------	--------------------------	--------------------------	--------------------------

The proposed project designates new school sites. The EIR will evaluate the availability of school services to serve proposed development.

Parks?

<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
-------------------------------------	--------------------------	--------------------------	--------------------------

The proposed project designates new park sites. The EIR will evaluate the availability of parks to serve proposed development.

Other public facilities?

<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
-------------------------------------	--------------------------	--------------------------	--------------------------

Under the direction of the City of Rocklin, the EIR will examine the major public services and utilities normally associated with a community plan of the scale contemplated by the project.

Potentially Significant Impact	Less Than Significant With Mitigation Incorporation	Less Than Significant Impact	No Impact
--------------------------------	---	------------------------------	-----------

XIV. RECREATION

- a) Would the project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?

The project includes the new parks to accommodate new residents. This issue will be discussed in the EIR.

- b) Does the project include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment?

The land use plan includes development of parks. This issue will be evaluated in the EIR.

XV. TRANSPORTATION/TRAFFIC. Would the project:

- a) Cause an increase in traffic which is substantial in relation to the existing traffic load and capacity of the street system (i.e., result in a substantial increase in either the number of vehicle trips, the volume to capacity ratio on roads, or congestion at intersections)?

The plan area will contribute to regional traffic volumes. This issue will be evaluated in the EIR.

- b) Exceed, either individually or cumulatively, a level of service standard established by the county congestion management agency for designated roads or highways?

See response XV.a) above.

- c) Result in a change in air traffic patterns, including either an increase in traffic levels or a change in location that results in substantial safety risks?

The proposed project will not impact air traffic patterns.

- d) Substantially increase hazards due to a design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?

The proposed roadway network will be designed consistent with City of Rocklin roadway design criteria.

<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
--------------------------	--------------------------	-------------------------------------	--------------------------

<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
-------------------------------------	--------------------------	--------------------------	--------------------------

<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
-------------------------------------	--------------------------	--------------------------	--------------------------

<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
-------------------------------------	--------------------------	--------------------------	--------------------------

<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
--------------------------	--------------------------	--------------------------	-------------------------------------

<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
--------------------------	--------------------------	-------------------------------------	--------------------------

	Potentially Significant Impact	Less Than Significant With Mitigation Incorporation	Less Than Significant Impact	No Impact
e) Result in inadequate emergency access?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
	<i>The proposed roadway network will be designed consistent with City of Rocklin roadway design criteria.</i>			
f) Result in inadequate parking capacity?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
	<i>The proposed roadway network will be designed consistent with City of Rocklin roadway design criteria.</i>			
g) Conflict with adopted policies, plans, or programs supporting alternative transportation (e.g., bus turnouts, bicycle racks)?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
	<i>The proposed roadway network will be designed consistent with City of Rocklin roadway design criteria.</i>			

XVI. UTILITIES AND SERVICE SYSTEMS. Would the project:

a) Exceed wastewater treatment requirements of the applicable Regional Water Quality Control Board?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
	<i>The proposed project will obtain wastewater treatment service from a municipal source. The availability of wastewater treatment service will be evaluated in the EIR.</i>			
b) Require or result in the construction of new water or wastewater treatment facilities or expansion of existing facilities, the construction of which could cause significant environmental effects?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
	<i>The proposed project will require extension of wastewater infrastructure. This issue will be evaluated in the EIR.</i>			
c) Require or result in the construction of new storm water drainage facilities or expansion of existing facilities, the construction of which could cause significant environmental effects?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
	<i>The project includes the installation of stormwater drainage facilities, including onsite detention to maintain pre-project peak discharge conditions. This issue will be evaluated in the EIR.</i>			
d) Have sufficient water supplies available to serve the project from existing entitlements and resources, or are new or expanded entitlements needed?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
	<i>The proposed project will obtain water from a municipal source. The availability of water service will be evaluated in the EIR.</i>			

	Potentially Significant Impact	Less Than Significant With Mitigation Incorporation	Less Than Significant Impact	No Impact
e) Result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<i>The proposed project will obtain wastewater treatment service from a municipal source. The availability of wastewater treatment service will be evaluated in the EIR.</i>				
f) Be served by a landfill with sufficient permitted capacity to accommodate the project's solid waste disposal needs?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<i>The proposed project will dispose of solid waste at an established municipal landfill. The availability of landfill capacity will be evaluated in the EIR.</i>				
g) Comply with federal, state, and local statutes and regulations related to solid waste?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<i>The project is proposed consistent with solid waste regulations of the City of Rocklin. This issue will be evaluated in the EIR.</i>				

XVII. MANDATORY FINDINGS OF SIGNIFICANCE

- a) Does the project have the potential to degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?
- b) Does the project have impacts that are individually limited, but cumulatively considerable? ("cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects)?
- c) Does the project have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly?

CITY OF ROCKLIN

MEMORANDUM

DATE: October 5, 1999

TO: George Djan, Senior Planner

FROM: James W. Pennington, Fire Chief

RE: Draft EIR for Marchbrook/Sunset Ranchos

The following comment is in response to the initial study for the above-referenced project.

Reference page 18, Item h:

There is a potential increased exposure to wildland fire threats due to the amount of open space and/or hillside areas within the plans' area.

Said threats can be less than significant with mitigation incorporation.

Rocklin, CA 95677

Re: Notice of Preparation of DEIR for Marchbrook/Sunset

Dear George:

Thank you for the opportunity to comment on the Notice of Preparation of a DEIR for Marchbrook/Sunset Ranchos.

The Town of Loomis continues to be concerned with any traffic impacts that may occur on Sierra College Boulevard and that these impacts are fully mitigated.

Specifically, the traffic volumes analyzed for this project should assess trip distribution and turning movements onto Sierra College Blvd. (through Whitney Oaks) and at intersections within Loomis that might be affected. These impacts should receive mitigation, at a minimum through a fair share concept including maintenance costs.

Previously Rocklin has included a fair share mitigation in projects on Sierra College Blvd. Would you please inform us, in writing, of the progress you have made in developing these "fair share" amounts to be used in Rocklin and on what improvements they are based.

Thank you for your consideration of these comments and for continuing to send us any referrals that may have impact on Sierra College and other roadways within Loomis.

Sincerely,

Kathy Kerdus
Planning Director

Re: Marchbrook/Sunset Ranchos
Rocklin

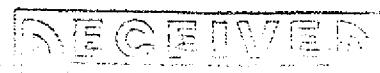

Please be advised that PG&E will serve this project under our Gas and Electric Rules 15 & 16.

- ⇒ Any relocation or rearrangement of the existing facilities due to this development will be at the expense of the developer.
- ⇒ It is the developers responsibility to notify PG&E of any work that is required. The location and design of the service(s) and meter(s) shall be determined by PG&E
- ⇒ Design for the service for this project shall not begin until PG&E has received a full set of improvement plans for this project which have been approved by the City.
- ⇒ All existing easements and public rights of way shall be maintained.
- ⇒ Any physical barriers that may be required by PG&E to protect their equipment will be furnished by the developer
Call Underground Service Alert at 1-800-227-2600 and verify gas and electric facilities and plot on improvement plans.
- ⇒ All grading must maintain 12" minimum clearance over gas facilities and 24" minimum cover from finish grade. Please pothole if necessary to verify cover. Please call us at (530) 889-3271 to request an inspector to stand by while potholing facilities. Please give us 48 hours notice to schedule an inspector, there is no charge for this service.

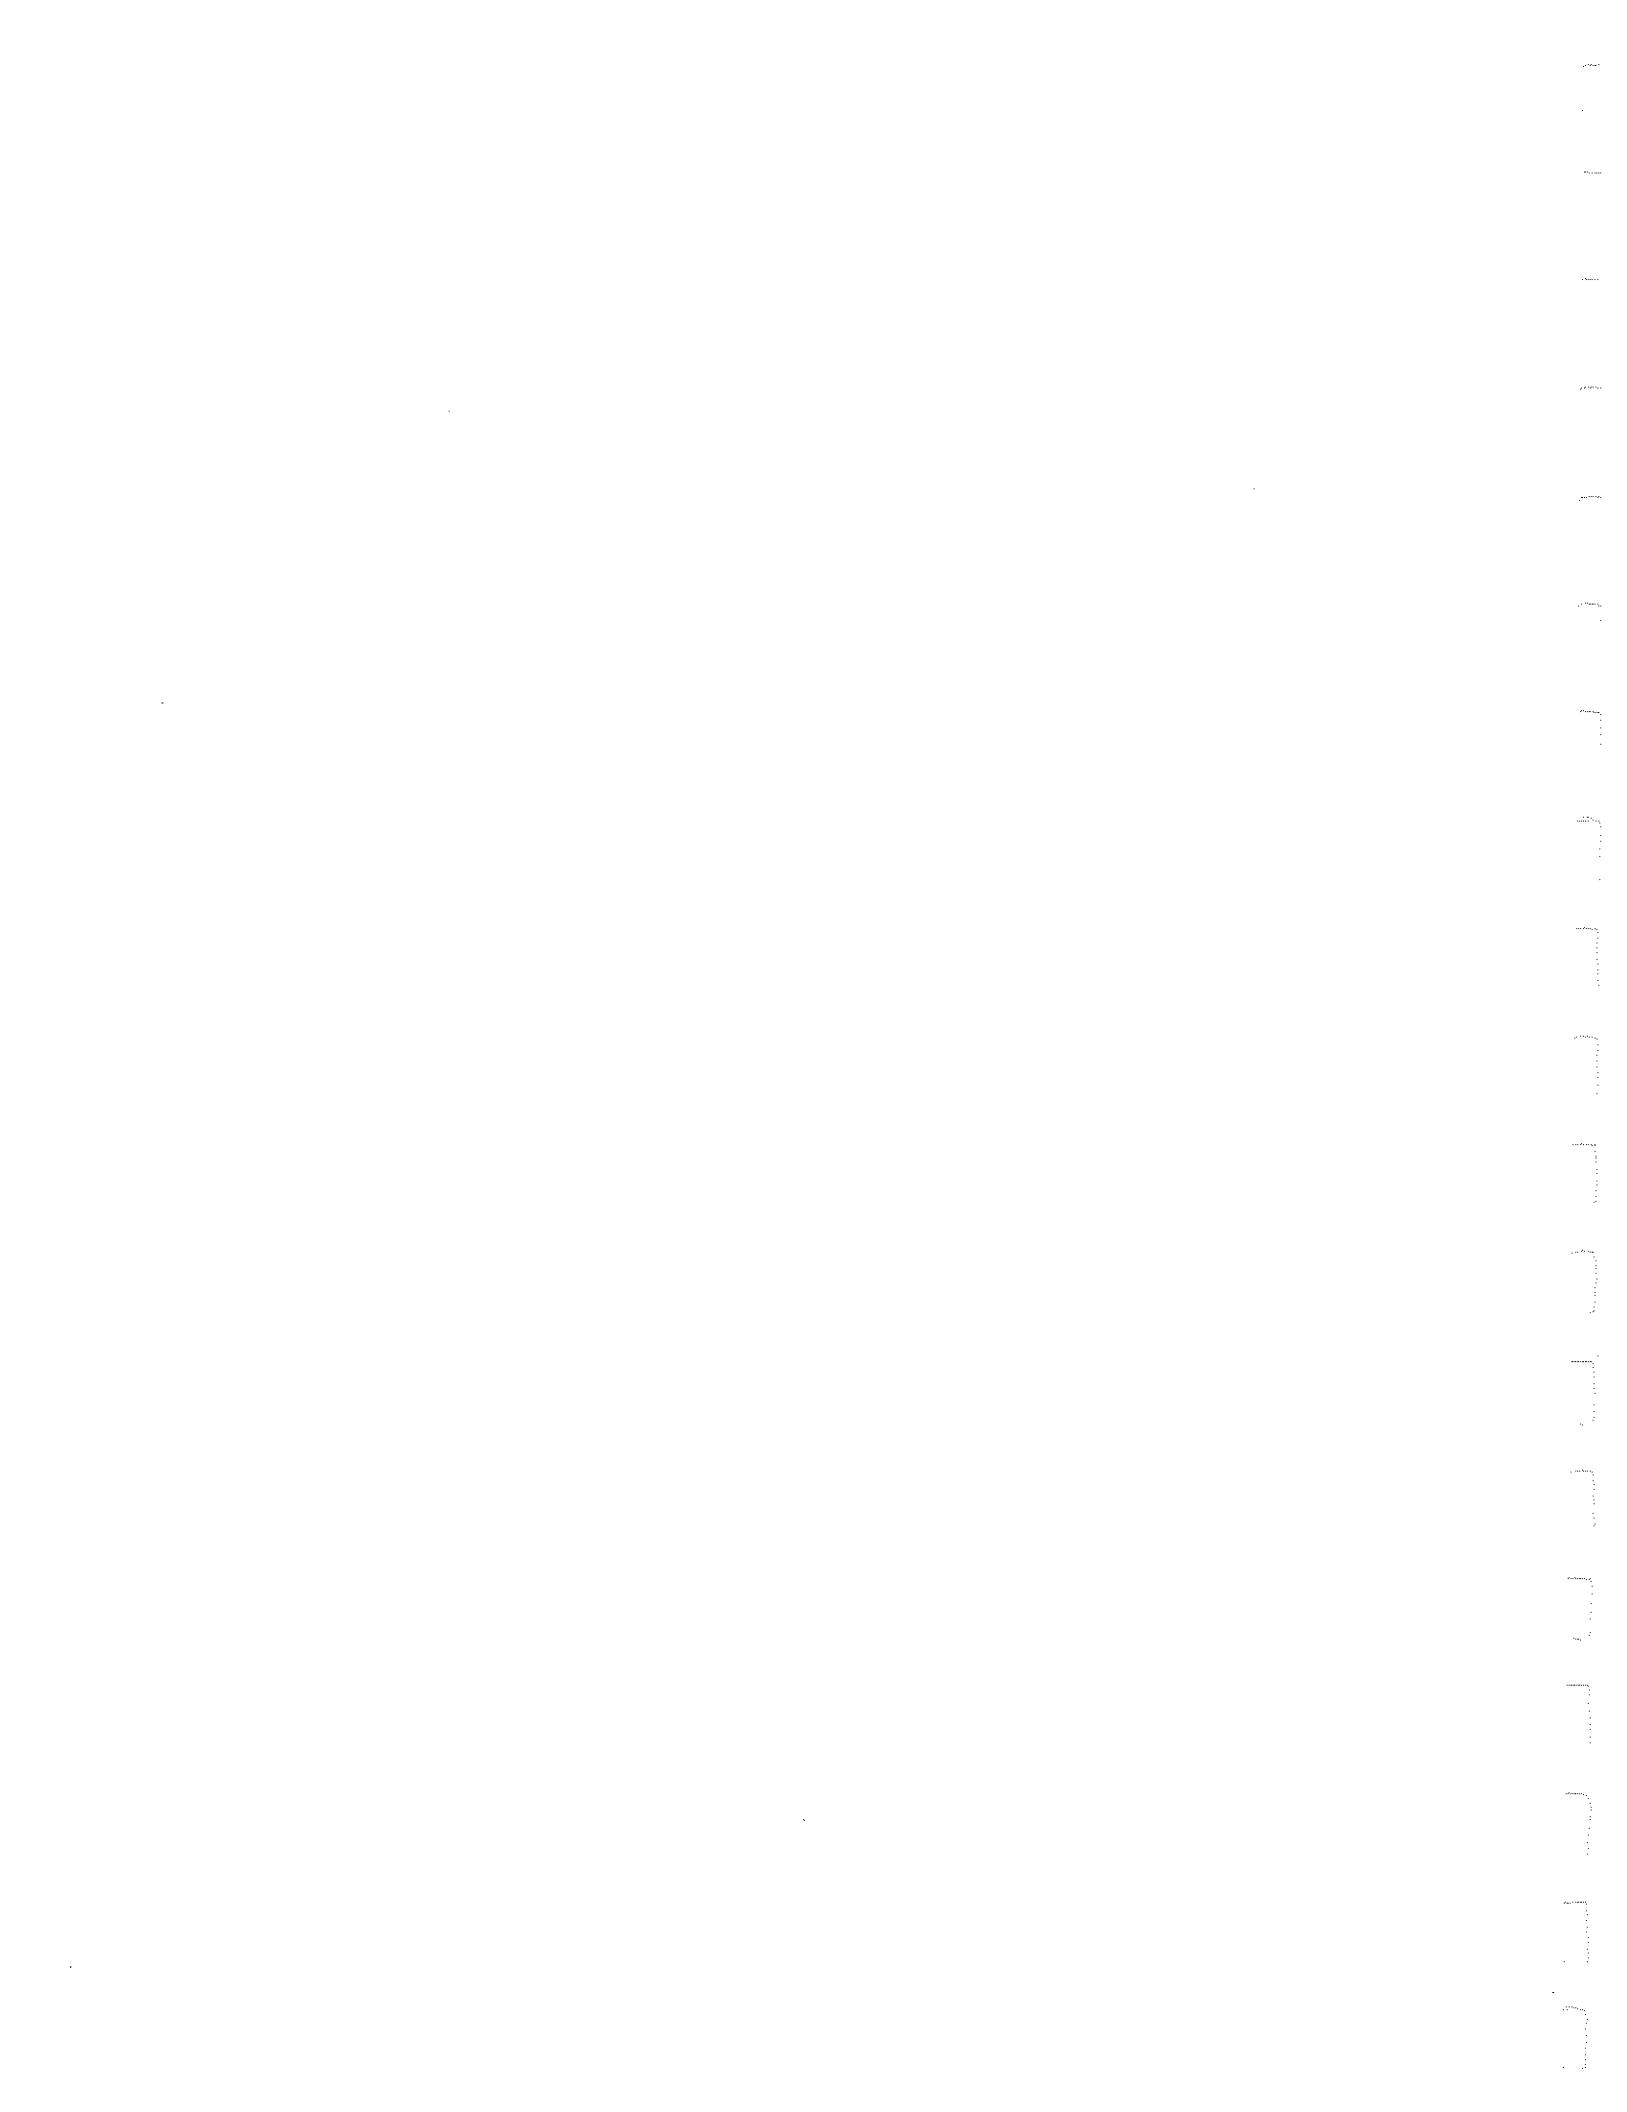

If you have any questions, please contact me at (530) 889-3134.

Sincerely,

Mary Westfall

City of Rocklin
P.O. Box 1380
Rocklin, CA 95677

SUBJECT: Marchbrook/Sunset Ranchos, NOP of Draft EIR - Approximately 3,536 Single Family Lots
1,066 Multi-Family Units, Three Schools, Parks, Commercial, Light Industrial/or Business-
Professional Land Uses

Dear Mr. Djan:

In response to your notice of preparation received by the Agency October 6, 1999, pursuant to subdivision (d) of Water Code Section 10910, the projected water demand for the Marchbrook/Sunset Ranchos project, Highway 65 Corridor and Parcel K (the "Project") was not included as part of this Agency's most recently adopted Urban Water Management Plan for the Agency's Zone No. 1 water system.

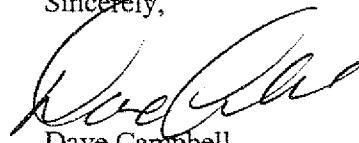

At the present time, the Agency can not assure the City of Rocklin that the projected water supplies available for Zone No. 1 during normal, single-dry, and multi-dry water years included in the 20 year projection contained in the Urban Water Management Plan and subsequent Agency master plan studies will meet the projected water demand for the proposed project, in addition to the Zone No. 1 system's existing and planned future uses.

Additional study will be required to determine an adequate water supply and delivery infrastructure.

The purpose of this letter is to comply with the requirements of Section 10910 and apprise you of the current status of treated water availability for the Project. This letter in no way confers any right or entitlement to receive water service in the future. The Agency makes commitments for service only upon the execution of a pipeline extension or service order agreement and the payment of all fees and charges required by the Agency, including the Plant Expansion and Replacement Charges.

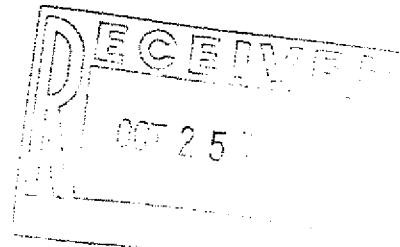

If you have any questions, please call me at the Engineering Department at (530) 823-4886.

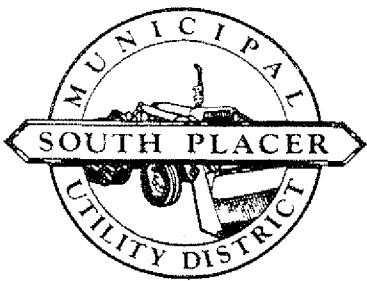

Sincerely,

Dave Campbell
Engineering Technician

Attention: Mr. George Djan

Subject: Marchbrook-Sunset Ranchos Project
General Plan Amendment, Pre-Zoning, General Development Plan, and
Annexation - Notice of Preparation

Dear Mr. Djan:

With the exception of the Atherton Tech Center and Herman Miller Properties (currently within SPMUD), the Marchbrook-Sunset Ranchos Project lies outside the boundaries of the South Placer Municipal Utility District. Annexation to SPMUD is required in order for the project to be eligible for District sewer service.

As with past annexations into the City of Rocklin, concurrent annexation to SPMUD can occur automatically provided that the District is included in the action. Upon approval by LAFCO, and submittal to SPMUD of a certified copy of Rocklin's resolution ordering/approving the annexation, a 90 day period commences in which, if no objection is made by the District, the property is annexed to SPMUD. The project proponent will be responsible for the payment of annexation fees to SPMUD.

In the event the property is successfully annexed, all sewer service which the District may thereafter, provide to said lands or any portion thereof will be subject to all ordinances, resolutions, rules and regulations, taxes, charges, fees, and assessments of the SPMUD which may now or hereafter be in effect.

The design and construction of all on-site and off-site facilities, which may be required as a result of this project, will be the responsibility of the developer/owner. All work shall conform to the

City of Rocklin
Mr. George Djan
October 26, 1999
Page -2-

Standard Specifications of SPMUD. Improvement plans shall be submitted to SPMUD for review and approval. It should be noted that substantial sewer construction may be required in order to serve the project.

A preliminary analysis of the District's existing sewers (within the Stanford Ranch area) has been made and indicates that a certain amount of excess capacity may be available to serve the project. However, the excess capacity is not sufficient to serve the proposed buildup of the project. The developer will be responsible for conducting, in consultation with his engineer, additional sewer studies as may be required to identify new sewers needed to serve the project and/or reconstruction/upsizing of existing sewers.

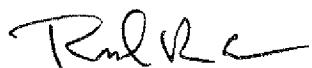

This letter does not constitute a reservation of capacity in the District's sewage treatment or collection facilities, nor does it constitute the assumption of a utility obligation to said lands or any portion thereof by the District.

The District may be rendered unable to provide sewer service to said lands due to prohibitions or restrictions which may be imposed upon it by federal, state, county or local regulatory agencies having jurisdiction or due to conditions caused by an Act of God. Prohibitions and/or restrictions may be imposed at the Roseville Regional Wastewater Treatment Plant on the plant's capacity; this may also impact the District's ability to accept new applications for sewer service for the project.

This letter shall be of no force or effect after the expiration of 365 calendar days from the date hereof, but may at the discretion of the District, be renewed or extended upon application of the developer/owner of the land referred to herein or their agent.

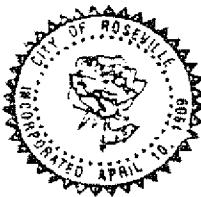

All non-residential development within SPMUD is subject to the requirements of the City of Roseville Industrial Waste Pretreatment Program in accordance with Ordinance 14.26 of the Roseville Municipal Code.

Sincerely,

Richard R. Stein
Project Administrator

Regarding: Notice of Preparation Comments for the Marchbrook/Sunset Ranchos Draft EIR

Dear Mr. Djan:

The City of Roseville Community Development Department appreciates the opportunity to comment on the Notice of Preparation (NOP) for the Marchbrook/Sunset Ranchos Draft EIR.

Project Description

The project is located immediately south of the Twelve Bridges plan area, east of Highway 65, northwest of the Stanford Ranch Plan Area, and north and south of Sunset Boulevard. The project site encompasses approximately 1,800 acres, and is referred to as the North West Rocklin Development Plan Area (Plan Area). The project includes annexation of the Plan Area, and development of a planned community that would include 3,423 single-family lots, 1,066 multi-family units, three 10-acre elementary school sites, 64 acres of park sites 190 acres of open space, and 24 acres of neighborhood commercial and community commercial uses.

Comments

Traffic

- 1) The EIR should evaluate the traffic impacts of the proposed projects within Roseville. Ideally, this would be done using the City of Roseville's traffic model.
- 2) The proposed project area is large enough to warrant payments to update the Highway 65 Joint Powers Agreement fees to reflect the increase in traffic due to the revised land use.

Marchbrook/Sunset Ranchos DEIR, Page 2

Public Utilities

- 1) Identify the source of sewer service for the project site. Specifically, identify the impacts to existing or new treatment facilities.

Thank you for the opportunity to provide comments on this project. Please forward any future Marchbrook/Sunset Ranchos project related CEQA documentation to:

Mark Morse, Environmental Coordinator
City of Roseville
Community Development Department

Rocklin, CA 95677

**SUBJECT: MARCHBROOK-SUNSET RANCHOS PROJECT
NOTICE OF PREPARATION**

The above project consists of a proposal for annexation and development of the area generally bounded by the City of Lincoln to the north, SR 65 to the west and the adopted Sunset West and Stanford Ranch Community Plan areas to the south and east.

The Placer County Department of Public Works has reviewed the Notice of Preparation and offer the following comments for your consideration:

1. The location of the western boundary of the annexation is unclear. It is described as "Highway 65." The annexation should be the western right-of-way limit of SR 65 and not the eastern right-of-way line. We would further recommend that this annexation should consider including the SR 65 right-of-way south to the Blue Oaks interchange.
2. The EIR must address the regional impacts of the proposed project, especially impacts to SR 65, all interchanges on SR 65, and Sierra College Boulevard from SR 193 to I-80.
3. The EIR should discuss the SR 65/Whitney interchange with respect to need, timing, and financing.
4. Impacts of the project on the Sunset Industrial Area Community Plan, especially with respect to the Transportation Capital Improvement Program and associated traffic mitigation fee, need to be discussed.
5. The impacts of the project on the SR 65 Joint Powers Authority, and the infrastructure financing associated with it, need to be discussed.

Thank you for the opportunity to review this application. If you have any questions or comments, please call me at (916) 889-7554.

Placer County LOCAL AGENCY FORMATION COMMISSION

175 Fulweiler Avenue, Auburn, California, 95603
530.889.4097 FAX: 530.889.4099

Date: November 1, 1999

To: George Djan, AICP
City of Rocklin Planning Department

From: Deborah Cubberley, Executive Officer
Placer County Local Agency Formation Commission

Subject: NOP for a DEIR for the Marchbrook/Sunset Ranchos Project

Thank you for the opportunity to comment on the NOP for this project. The following comments address specific environmental concerns and reference the LAFCO policies related to these issues. The City and proponents should be aware of these policies and be prepared to respond to them as required.

The DEIR should address the following items:

1. Loss of agricultural land, significant open space areas, and riparian areas. (LAFCO policy 2[1])
2. Alternative project analyses, including (a) the placement of the proposed development at a site(s) within the existing City boundaries and (b) phased annexation associated with proposed development phases and market demand. (LAFCO policies 2[2], 2[3], 3c[1], 3c[2], 3c[3])
3. An environmental analysis that includes and excludes roadways that delineate proposed boundaries, in this case Highway 65. (LAFCO policy 1d[3]).
4. Any environmental impacts associated with special district boundary and/or sphere of influence adjustments that may be required or desired as a part of City annexation. This would include such special districts as South Placer Municipal Utility District.

Please note, a copy of the recently amended LAFCO policy document is attached for your convenience.

PART III

COMMISSION GUIDELINES

The Local Agency formation Commission is created by and operates under the Cortese/Knox Local Government Reorganization Act of 1985 (Government Code, Section 56000 et seq. -the "Cortese/Knox Act"). LAFCO actions are also subject to a number of other state laws such as special district principal acts and the California Environmental Quality Act. Together these mandates provide the basis for LAFCO activities.

While the Cortese/Knox Act provides clear direction in its intent and in many cases provides specific procedural guidelines, it recognizes that unique local situations and issues require some flexibility in the law. Through the adoption of policies each LAFCO's interpretation and implementation of the law will reflect an area's unique priorities, problems, and attributes.

A. LEGISLATIVE MANDATES AND POLICY STATEMENTS

The Cortese/Knox Act provides the following basic guidelines and objectives:

1. To encourage the orderly formation of local governmental agencies. This includes discouraging a duplication of services, controlling the proliferation of local governments, and encouraging multipurpose government agencies over single or limited purpose agencies.
2. To preserve agricultural land and open space resources.
3. To encourage logical patterns of growth and discourage urban sprawl.

B. LAFCO AUTHORITY

As a means of implementing the legislative goals, LAFCO's were given the authority to approve or deny the extension of services through the creation and amendment of local government boundaries. LAFCO's were also given the authority to establish spheres of influence for the purpose of facilitating planning by local agencies.

1. *The legislature directs LAFCO to include in their consideration of jurisdictional changes the following factors:*

- a. population and population density
- b. land area, land use, topography, and geographic features
- c. need for services and adequacy of services in the area
- d. the effect of the proposed change on adjacent areas and agencies
- e. the conformity of the proposal with mandates and local policies
- f. the effect of the proposal on agricultural lands
- g. consistency with adopted spheres of influence
- h. the distinction and certainty of the boundaries
- i. comments of any affected local agency

2. *The consideration of the following four factors when making determinations involving spheres of influence:*

- a. the present and planned land uses in the area
- b. the present and probable need for public facilities and services in the area
- c. the present capacity of public facilities and adequacy of public services
- d. the existence of any social or economic communities of interest in the area

C. COMMISSION POLICIES

The Placer County LAFCO (the Commission) has adopted the following policies as a means of implementing the Cortese/Knox Local Government Reorganization Act. They are categorized under four headings, three reflect the legislature's policy guidelines and a fourth addresses miscellaneous administrative and procedural issues.

1. ENCOURAGE THE ORDERLY FORMATION OF LOCAL GOVERNMENTAL AGENCIES

a. SERVICE PROVISION

Recognizing that the general purpose of government is to serve its citizens and that the purpose of LAFCO is to promote orderly and efficient forms of government, the consideration of service questions related to jurisdictional changes is paramount. Reflected in the following policies is the Commission's concern that (1) thorough service information be made available, (2) that each affected agency be made aware of the impacts of a jurisdictional change, and (3) that as development occurs a complete range of necessary services is accessible.

(1) *POLICY: Requests for information from an applicant or the representative of an applicant, or from any affected agency or department thereof, shall provide complete and full disclosure of information deemed relevant to the subject proposal.*

(2) *POLICY: Every LAFCO Proposal Application and Justification form shall be signed by a responsible party, stating that the information provided is in compliance with the Commission's disclosure policy.*

(3) *POLICY: The plan for service provision submitted as part of an application for jurisdictional change shall include the following information: (1) an enumeration and description of the services to be extended to the affected territory; (2) the level and range of those services; (3) an indication of when those services can feasibly be extended to the affected territory; (4) an indication of any improvement or upgrading of structures, roads, sewer or water facilities, or other conditions the local agency would impose or require within the affected territory if the change of organization or reorganization is completed; and (5) information with respect to how those services will be financed.*

In addition to the foregoing information, the following information will be required as part of each plan for service:

(a) a list of the existing services available to the affected area, and the agencies providing those services

(b) a list of services available through the affected agency or agencies

(c) a comparison of the existing and proposed service levels and the effects of the proposed change on service in adjacent areas

(d) a description of all special local taxes, assessments, fees, and outstanding bonds that will potentially affect the proposal area

(e) identification of any resource shortages or facility inadequacies presently experienced or anticipated by the affected agency

(4) **POLICY:** All proposals involving jurisdictional change will include a plan for services. Those proposals initiated by resolution of the affected agency shall include the plan for service with the application. When proposals are initiated by petition, the Commission's staff shall notify the affected agency and request a plan for service. In cases where the proposed jurisdictional change involves a reorganization, the plan for service shall address all of the affected agencies.

(5) **POLICY:** The following standards shall apply to the evaluation of plans for service:

(a) Each plan for service must be signed and dated by an official representative of the agency, certifying completeness and accuracy. In cases where the proposal includes annexation to more than one agency, the plan for service must be signed by a representative of each annexing agency or each agency may submit its own separate plan for services.

(b) The plans for service shall be made part of the file and shall be circulated to affected agencies and County departments for comment. The subject agency shall respond to any requests for additional or clarifying information.

(6) **POLICY:** The Commission shall approve the extension of services by contract only when the agency in question can show it is not reasonable or possible to annex the site at the time the request is submitted.

b. COMMUNITY APPROACH

The Commission finds that a community approach to service provision is beneficial in that it facilitates the eventual consolidation of local agencies, it clarifies and simplifies service delivery, it assures the most complete ranges of services available to a developing area, and it helps define and empower a community. The Commission shall encourage a community approach to service provision by encouraging the coterminous development of local agency boundaries within the area.

(1) **POLICY:** Spheres of influence for all local agencies serving a particular community shall be coterminous whenever possible.

(2) **POLICY:** Service provision shall be viewed on a community basis. Annexation to a city shall generally be accompanied by simultaneous annexation to the special districts that serve that community. Likewise, when possible, annexation to a special district that serves a city shall include annexation to that adjacent city.

c. AGENCY PROLIFERATION

The Commission finds that great numbers of special districts add to various departmental workloads and increase the cost of government. It recognizes that layer upon layer of governmental agencies produce confusion and lead to duplication of services. It recognizes that in most cases the most efficient and effective agencies to provide needed levels of service are multipurpose local agencies, and that those local agencies most qualified to provide a full range of urban-type services are cities.

(1) **POLICY:** The Commission may undertake studies of special districts for the purpose of examining the potential for efficiencies through reorganization. Districts most likely to be the subject of such studies include those that fall into one or more of the following categories:

(a) overlaying districts that provide the potential for service duplication

(b) inactive districts

(c). overlaying limited purpose districts that could be consolidated into a single multipurpose district

(d) districts that include significant areas where no services are provided

(e) districts which appear to provide an inadequate level of service

(f) districts which are overlain by a city and may be merged into the city

(2) **POLICY:** If the special district studies determine that some type of governmental reorganization is appropriate, the Commission may initiate a consolidation, a dissolution, a merger, or the formation of a subsidiary district.

(3) **POLICY:** The Commission may identify possible opportunities to reduce the number of special districts through the establishment of coterminous spheres of influence and sphere of influence determinations that recommend ultimately dissolving, merging, or consolidating districts (zero spheres of influence). Such opportunities shall consist of those special districts that fall into the categories listed in Policy c(1).

(4) **POLICY:** The initiation of consolidations, mergers, dissolutions, and the formation of subsidiary districts by the affected governing bodies and/or the affected landowners and voters shall be encouraged.

(5) **POLICY:** The Commission shall utilize its authority to condition proposals in a manner that will discourage agency proliferation and encourage special district consolidation or dissolution where appropriate.

(6) **POLICY:** The Commission encourages special districts and other affected agencies to identify and evaluate possible opportunities to consolidate, merge, or dissolve local agencies.

(7) **POLICY:** When considering the extensions of service to an area the Commission shall favor the provision of services by multipurpose agencies over limited or single purpose agencies. Generally, priority shall be given as follows:

(a) annexation to an existing city

(b) annexation to an existing county service area

(c) annexation to an existing independent multipurpose district

(d) annexation to an existing independent single purpose district

(e) formation of an independent multipurpose district

(f) formation of an independent single purpose district

(8) **POLICY:** Every proposed new district formation, district consolidation, merger, or formation of a subsidiary district shall be accompanied by a feasibility study that contains, at a minimum, the following elements.

(a) an explanation of the reasons for the proposed formation and a brief description of the characteristics of the study area

(b) a description of the local agencies presently serving the area, and their range and level of service, and a discussion of the potential impacts that the proposed formation would have on these districts

(c) a description of and rationale for the proposed boundaries

- (d) a description of the proposed district services and service financing plan
- (e) a five year budget projecting all expected revenues and expenditures
- (f) an analysis of other governmental options for service
- (g) a list of the pros and cons of the proposed formation

(9) POLICY: An application to the Commission for district consolidation, district merger, or the formation of a subsidiary district shall include proof of at least one public hearing on the subject held within each district applying for consolidation or merger. Notice for the hearing shall be published in a newspaper of general circulation within each district affected. The notice shall be published at least fourteen days but no more than thirty days before the scheduled hearing and shall be no less than 1/8 of a page in size.

d. BOUNDARIES

The Cortese/Knox Act encourages the logical formation and determination of local agency boundaries and requires LAFCOs to consider "the nonconformance of proposed boundaries with lines of assessment..." when reviewing a proposal for jurisdictional change.

The Commission finds that boundaries that follow lines of assessment are clearer, more understandable, and more readily identifiable. They facilitate service provision, assist in the determination of permissible land uses, simplify the assessment and property tax process, and encourage consistent mapping of jurisdictions. The Commission recognizes that there are times when the strict use of assessor parcels will result in an awkward proposal boundary. In such cases, it may be necessary to consider minor adjustments to the proposal boundaries or a change in the parcel lines.

One of the Commission's most powerful tools is the ability to amend the boundaries of a proposal in order to create a boundary that the Commission feels is more equitable or effects better service provision. Related to this power is the ability of the Commission to expand a proposal to include additional jurisdictional changes. For example, a proposal to annex to a full service city may need to be expanded to include a detachment from a local fire district to prevent a duplication of service.

(1) POLICY: *Sphere of influence revisions and jurisdictional changes involving assessor parcel splits shall be avoided whenever possible. Exceptions may be made where the applicant is able to prove that the split cannot reasonably be avoided without incurring undue hardship.*

(2) POLICY: *The Commission will generally honor an agreement between a city and the County, or a city and a city with respect to the inclusion or exclusion of roads adjacent to one or more of the boundaries of a proposed annexation. If no such agreement is in place, the entire width of any roadway which is adjacent to the property to be annexed should be included within the annexation when one or more of the following conditions apply:*

(a) the roadway will include significant new facilities (such as sewer lines, water lines, storm drains, or notable traffic control measures) that will be maintained by the annexing jurisdiction;

(b) based upon existing and future potential land uses in the area, the primary users of that portion of the road would most likely be generated by the annexing entity; or

(c) whenever the Commission, after considering the overall impacts, adjacent land uses, historic and perceptual boundary concerns, and other factors relevant to LAFCO policy, determines that annexation of the roadway would be appropriate.

(3) *The environmental documentation prepared for each project which proposes annexation of property to a city in which one or more of the boundaries between the city and the County or the city and another city are delineated by a road, shall include analyses which place the road within each of the jurisdictions. The environmental document or a supplemental document prepared by the applicant shall address the long-term maintenance costs associated with each of these potential scenarios.*

(4) **POLICY:** *Special districts shall be detached from an area when a city annexes that area and assumes the role of service provider in place of the special district.*

2. PRESERVE AGRICULTURAL LAND AND OPEN SPACE RESOURCES

While the Commission is prohibited from imposing any conditions "which would directly regulate land use density or intensity, property development, or subdivision requirements," the Commission is required to consider land use and related data in their review. Without specifying how a particular area should be zoned or developed, the Commission may adopt policies that require prezoning and/or development plans to accompany a proposal.

The premature conversion of farmland and open space to other uses is discouraged by the Cortese/Knox Act. In the pursuit of this goal, the Commission has authority to modify the proposal's boundaries or to deny an untimely proposal. Information regarding land use designations and existing and proposed land uses assists the Commission in its determinations as to the appropriateness of a proposal's timing and boundaries.

(1) **POLICY:** *The Commission encourages all agencies within the County to adopt and exercise development policies that promote orderly development and logical boundaries and protect productive agricultural lands and significant open space areas, including riparian areas.*

(2) **POLICY:** *Unless the subject area is substantially developed to its ultimate use, annexation to a city or special district will be linked to a proposal to develop and not be speculative in nature. Development plans, including a timetable, will be required as part of the LAFCO application for annexation.*

(3) **POLICY:** *Generally annexation of farmlands shall not be permitted when significant areas of non-productive farmland are already available. Development of vacant land within a city or district should be developed prior to fringe areas.*

(4) **POLICY:** *The Commission may set spheres of influence for unincorporated preserves for specified reasons such as to preserve the agricultural and open space areas or areas of possible future incorporation. Annexation of these areas by adjacent cities shall be discouraged. Annexation of these areas to special districts shall be approved only when the district's purposes are consistent with the sphere in question.*

3. ENCOURAGE LOGICAL PATTERNS OF GROWTH AND DISCOURAGE URBAN SPRAWL

One of the primary mandates of LAFCO is to encourage orderly growth and development, yet LAFCO is prohibited from directly regulating land use. With varying effect LAFCO can fulfill its mandate through the determination of jurisdictional boundaries and the extension of local agency services. The Commission recognizes that under existing circumstances, such goals will only be completely successful when they are embraced by all the area's local governments.

While the statutes encourage orderly growth and discourage urban sprawl, they do not define or set standards to quantify these concepts. At this juncture, these determinations must be made at the local level. These are difficult concepts to define since one person's orderly growth is another's urban sprawl.

Spheres of influence play an important role in the process of encouraging orderly growth. Under law each local agency is required to have a sphere of influence. These spheres provide direction and growth for the planning of the affected local agency and all adjacent agencies. Spheres can be critically important tools in the goal to establish logical boundaries, yet their value is often underestimated. As a result they are not used as effectively as they might be. Spheres define the future boundaries of the entity. Once spheres of influence are established, the question of annexation within the sphere is primarily one of timing.

a. ORDERLY GROWTH

(1) **POLICY:** *The Commission encourages the urbanization of certain lands over others and hereby establishes a priority list for urbanization:*

- (a) *vacant or underdeveloped land within the existing boundaries of a city*
- (b) *vacant or underdeveloped land within the adopted sphere of influence of a city*
- (c) *vacant or underdeveloped land outside the adopted sphere of influence of a city*

(2) **POLICY:** *The commission will consider the following factors in determining logical growth patterns in reviewing proposals for annexation to a city or expansion of a city's sphere of influence:*

- (a) *adjacency with existing and planned growth pattern of the city*
- (b) *projected growth demand and relationship to remaining lands to be developed within the city and its existing sphere*
- (c) *ability of the city to provide and fund needed services (utilities, transportation, public safety, recreation, libraries) to the levels defined by the city's general plan*
- (d) *pending or anticipated development applications to the County for areas within a city's existing sphere*

(3) **POLICY:** *The Commission discourages urban level development in unincorporated areas adjacent to city boundaries*

b. SPHERES OF INFLUENCE

(1) **POLICY:** *To allow for the evaluation of projected growth demand and its relationship to remaining lands to be developed within the city and the city's sphere, proposals for sphere of influence revisions (other than minor adjustments) shall require certain data for the consideration of the Commission. It is recognized that sphere reviews associated with periodic updates of the general plan will be more conceptual than those associated with specific projects. In any case, the data provided shall be as accurate, thorough, and pragmatic as possible. The data provided shall include the following:*

- (a) *A market absorption study analyzing proposed uses in relation to similar uses within the city and the city's sphere. The study shall:*

- I. *Cover a 15 to 20 year planning horizon,*

II. include all major land use categories proposed within sphere revision (residential, commercial, office and industrial),

III. identify project and citywide buildout capacities for the proposed land uses,

IV. provide an analysis of the competitive strength of the affected city land uses within the regional market, and the proposed project land uses within the anticipated city capture of that regional market,

V. contain a breakdown of projected absorption and supply margins over time by both land use and by geographic planning area within the city. At a minimum, the analysis should distinguish projected absorption between the proposed sphere area and the existing (infill) portion of the city and the city's sphere area, and

VI. include a summary of key assumptions and methodologies used in generating the absorption projections.

(b) Analysis of alternative project sites located elsewhere within the city or its existing sphere. This analysis shall be included as an alternative in the environmental document prepared for the proposed sphere expansion. If such alternative sites are determined not to be feasible as defined by CEQA, the environmental document shall include a discussion of the reasons and relevant data used to make such determinations. LAFCO staff shall be afforded the opportunity to comment on the adequacy of the alternatives analysis prior to certification of the environmental document.

(2) **POLICY:** Expansions of city spheres of influence shall be discouraged if there is feasible land appropriate for the proposed uses already within the sphere of influence.

(3) **POLICY:** City Spheres of influence shall be reviewed when the general plan is updated or when there is a general plan amendment that would affect the city boundaries. In addition at LAFCO's request cities shall review their spheres no more frequently than every five years, advising LAFCO of their findings and submitting sphere amendment requests to LAFCO if circumstances warrant.

(4) **POLICY:** If the Commission determines that a request for expansion of a city's sphere of influence would have the effect of exceeding the market demand for a particular use within the planning horizon, the Commission may approve the requested sphere expansion conditional upon detachment of other areas from the sphere.

(5) **POLICY:** Special district spheres of influence will include only those areas that may benefit from the services provided by that district. This determination will be made based upon the relevant general and/or community plan for the area.

c. ANNEXATIONS

(1) **POLICY:** To allow for the evaluation of projected growth demand and its relationship to remaining lands to be developed within the city, proposals for annexations to a city or reorganizations including annexation to a city (except unincorporated islands and minor adjustments) shall be accompanied by the following:

(a) A market absorption study analyzing proposed uses in relation to similar uses within the city. The study shall:

- I. Cover a 15 to 20 year planning horizon,
- II. include all major land use categories proposed within annexation (residential, commercial, office and industrial),
- III. identify project and citywide buildout capacities for the proposed land uses,
- IV. provide an analysis of the competitive strength of the affected city land uses within the regional market, and the proposed project land uses within the anticipated city capture of that regional market,
- V. contain a breakdown of projected absorption and supply margins over time by both land use and by geographic planning area within the city. At a minimum, the analysis should distinguish projected absorption between the proposed annexation area and the existing (infill) portion of the city, and
- VI. include a summary of key assumptions and methodologies used in generating the absorption projections.

(b) Analysis of alternative project sites located elsewhere within the city or its existing sphere. This analysis shall be included as an alternative in the environmental document prepared for the proposed annexation or reorganization including annexation. If such alternative sites are determined not to be feasible as defined by CEQA, the environmental document shall include a discussion of the reasons and relevant data used to make determinations. LAFCO staff shall be afforded the opportunity to comment on the adequacy of the alternatives analysis prior to certification of the environmental document.

(2) **POLICY:** Unless special circumstances can be demonstrated, city annexations or reorganizations including city annexations shall be discouraged if there are feasible alternative sites for the annexation proposal already within the city.

(3) **POLICY:** Large development proposals that are proposed to be developed in phases may be annexed in phases, ensuring that growth occurs in a logical pattern.

(4) **POLICY:** All city annexation proposals shall be prezoned unless the city or landowner is able to prove to the satisfaction of the Commission that it would be detrimental to do so.

d. UNINCORPORATED ISLANDS

The creation and continued existence of unincorporated islands is expressly discouraged and/or prohibited. Unincorporated islands must continue to be serviced by the County and other local agencies serving unincorporated areas, but because these service areas are isolated for other areas of service, they are difficult and expensive to serve.

Unincorporated islands, therefore, are not consistent with logical and efficient government.

(1) **POLICY:** The Commission shall discourage the creation of islands or areas not in a city but substantially surrounded by a city or cities, or by a city or cities and a county boundary or a major body of water.

(2) **POLICY:** *The Commission shall deny city annexations or reorganizations that include city annexations that create areas that are substantially or totally surrounded by a city. The Commission shall consider an area to be "substantially surrounded" when it is surrounded by a city or cities, or by a city or cities and a county boundary or a major body of water on at least 75% of its boundaries, unless one of the following conditions have been met:*

(a) *The Commission determines that denial of the proposal would be detrimental to the orderly development of the community and that the area that would be enclosed by the annexation cannot be reasonably annexed to another city or incorporated as a new city.*

(b) *In the case of areas which are substantially surrounded, the applicant provides written results of a landowner (uninhabited or inhabited) or registered voter (inhabited) survey that shows that inclusion of the unincorporated area would successfully subvert the proposal.*

(3) **POLICY:** *The Commission shall discourage the annexation of a portion of an existing island to a city unless the applicant provides written proof through a survey that the proposed annexation is the largest possible portion of that island that may be successfully annexed.*

4. ADMINISTRATIVE POLICIES

a. GENERAL

The following list of policies is generally administrative in nature and has been adopted for the purpose of refining and defining the Commission's process.

(1) **POLICY:** *If a proposed jurisdictional change between one or more agencies involves fiscal considerations beyond the adopted or standard arrangements, each affected agency*

shall study the effects of the proposal. If any affected agency feels that potential inequities exist, the agencies shall work together to reach and adopt a compromise.

(2) **POLICY:** *Unless otherwise specified by Commission action, the effective date of a change of organization or reorganization shall be the date that the Certificate of Completion is issued.*

(3) **POLICY:** *All requests made pursuant to Government Code Section 56833.3 for State Controller review of an applicant's incorporation fiscal analysis must be submitted within thirty days of the Commission's first published notice of the proposal. The costs associated for all such requests will be borne by the party making the request.*

b. ENVIRONMENTAL

Most LAFCO actions are subject to environmental review under the California Environmental Quality Act (CEQA). The Commission has an established environmental procedure which follows the mandates found in CEQA. This procedure is outlined in the procedure section of this manual.

The State CEQA Guidelines encourage the review of a project in its entirety and at the earliest possible point in the planning process in order to assess the cumulative impacts of the proposal.

The Commission recognizes that an organization or reorganization most often represents only a step in a series required in a larger project. This project may include prezoning, the approval of land development plans, and possibly a general plan amendment. Ideally there should be a single environmental review that addresses all aspects of the project. In these cases the primary agency (usually a city) is in the position to review land use designation changes, service extension plans, land development plans, and organization or reorganization. In these cases, the Commission shall generally act as responsible agency.

(1) *POLICY: Whenever an agency is considering a project (such as rezoning, a general plan amendment, site development, or the installation of infrastructure) that requires annexation or some other jurisdictional reorganization, the environmental review for that project shall include consideration of the environmental impacts of annexation or jurisdictional reorganization, and LAFCO shall be treated as a responsible agency.*

c. RECONSIDERATION

Any party may file a written statement requesting amendments to or reconsideration of any resolution adopted by the Commission. The following policies shall govern reconsideration by the Commission:

- (1) *POLICY: Requests for amendment to or reconsideration of a resolution of the Commission making determinations will be granted only when the petitioner can present some compelling new evidence or show that significant factors relevant to the proposal were overlooked through no fault of the party or the Commission. The requests shall state the specific modification to the resolution being requested.*
- (2) *POLICY: Any request shall be submitted within thirty days of the Commission's decision and prior to the completion of the proceedings of the conducting authority. Any rehearing is subject to full public notice.*
- (3) *POLICY: No request shall be deemed filed unless appropriate filing fees are submitted.*

Marchbrook Sunset Ranchos Project
Notice of Preparation of a Draft Environmental
Impact Report

Mr. George Dijan
Community Development Department
3970 Rocklin Road
Rocklin, CA 95677

Dear Mr. Dijan:

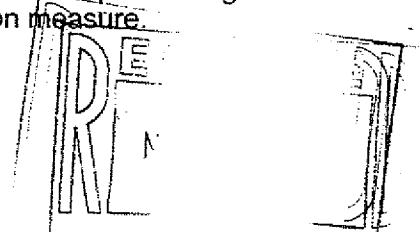

Thank you for the opportunity to comment on the Notice of Preparation of a Draft Environmental Impact Report for Marchbrook Sunset Ranchos Project. Our comments are as follows:

- A traffic study should be prepared to assess the project's impacts to State Route (SR) 65 and Interstate 80. The traffic study should incorporate the following scenarios:

Existing conditions without the project
Existing conditions plus the project
Cumulative conditions (without the project)
Cumulative conditions (with project build-out)

- The traffic analysis should provide a Level of Service (LOS) analysis for freeway, ramps, and ramp terminal intersections. A merge/diverge analysis should be performed for freeway and ramp junctions and all analysis should be based on AM and PM peak hour volumes. The procedures contained in the 1997 Update to the Highway Capacity Manual should be used as a guide for the traffic study.
- Mitigation measures should be identified where the project would have a significant impact. Caltrans considers the following to be significant impacts:

- Off-ramps with vehicle queues that extend into the ramp's deceleration area or onto the freeway.
- Vehicle queues at intersections that exceed existing lane storage.
- Project traffic impacts that cause any ramp's merge/diverge Level of Service (LOS) to be worse than the freeway's LOS.
- Project impacts that cause the freeway or intersection LOS to deteriorate beyond LOS E for freeway and LOS D for highway and intersections. (If the LOS is already "E" or "F", then a quantitative measure of increase queue lengths and delay should be used to determine appropriate mitigation measure.)

Mr. George Dijan
November 3, 1999
Page 2

Possible mitigation measures to consider include:

- Adding mainline capacity
 - Widening interchange ramps to increase capacity
 - Modifying ramp terminal intersections
 - Increasing the ramp acceleration or deceleration lane length to improve merge/diverge operations
- The analysis of future traffic impacts should be based on a 20 year planning horizon.
 - Future transportation systems assumed for cumulative conditions should only include those improvements which are included in the Placer County Transportation Planning Agency's most current Regional Transportation Plan.

Please provide our office with a copy of the Draft EIR and traffic study regarding this project. If you have any questions, please contact Cathy Felkins at (916) 323-5108.

Sincerely,

JEFFREY PULVERMAN, Chief
Office of Regional Planning

REVISED

Via: Fax and Regular Mail

Regarding: Notice of Preparation Comments for the Marchbrook/Sunset Ranchos Draft EIR

Dear Mr. Djan:

The City of Roseville Community Development Department appreciates the opportunity to comment on the Notice of Preparation (NOP) for the Marchbrook/Sunset Ranchos Draft EIR.

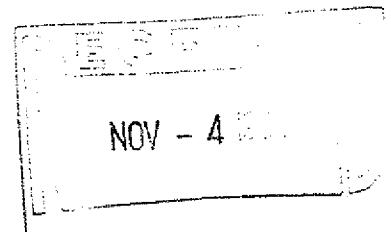

Project Description

The project is located immediately south of the Twelve Bridges plan area, east of Highway 65, northwest of the Stanford Ranch Plan Area, and north and south of Sunset Boulevard. The project site encompasses approximately 1,800 acres, and is referred to as the North West Rocklin Development Plan Area (Plan Area). The project includes annexation of the Plan Area, and development of a planned community that would include 3,423 single-family lots, 1,066 multi-family units, three 10-acre elementary school sites, 64 acres of park sites 190 acres of open space, and 24 acres of neighborhood commercial and community commercial uses.

Comments

Traffic

- 1) The EIR should evaluate the traffic impacts of the proposed projects within Roseville. Ideally, this would be done using the City of Roseville's traffic model.
- 2) The proposed project area is large enough to warrant payments to update the Highway 65 Joint Powers Agreement fees to reflect the increase in traffic due to the revised land use.

Public Utilities

- 1) Identify the sources of water and sewer service for the project site. Specifically, identify the impacts to existing or new treatment facilities.

Drainage

- 1) Please elaborate on the extent of plan area discharges across Sunset Boulevard to Pleasant Grove Creek, and the potential for impacts.

Thank you for the opportunity to provide comments on this project. Please forward any future Marchbrook/Sunset Ranchos project related CEQA documentation to:

RE: Notice of Preparation of a Draft EIR for Marchbrook/Sunset Ranchos Project

Dear George:

This project is located in both the Auburn Ravine and Pleasant Grove Creek watersheds. General assessment of flooding in these watersheds is indicated in the "Auburn Ravine, Coon, and Pleasant Grove Creek Flood Mitigation" report by CH2M Hill, July 1993.

We request the applicant submit an appropriate hydrology and hydraulic analysis in accordance with the Placer County Stormwater Management Manual along with the Environmental Impact Report for our review. This analysis should include the following items:

1. An evaluation of the ability of onsite detention facilities to reduce post-development flows to 90% of pre-development peak flows.
2. An assessment of whether project development will aggravate flooding downstream of the proposed subject project.
3. A discussion and analysis of the need for mitigation of increase in runoff volume.
4. A detailed map showing all proposed improvements, including onsite detention ponds, and their location relative to the 100-year floodplain.

Please call me at (530) 889-7303 if you have any questions regarding these comments.

Andrew Darrow, P.E.
Development Coordinator

Mr. George Djan, Senior Planner
City of Rocklin
Community Development Department
3970 Rocklin Road
Rocklin, California 95377

Dear Mr. Djan:

The Department of Fish and Game (DFG) has reviewed the Notice of Preparation (NOP) for a Draft Environmental Impact Report (DEIR) for the Marchbrook/Sunset Rancho Project (SCH# 99102012). The project proposes to rezone approximately 1,850 acres, located in an unincorporated area of Placer County (within the sphere of influence of the City of Rocklin) to allow commercial and residential development between the cities of Rocklin and Lincoln.

Significant resources of the project area include riparian and stream habitats, wetlands including vernal pools, and oak woodlands. Adjacent land uses include residential and commercial activities.

The DFG is providing these comments as a Responsible Agency having jurisdiction by law over natural resources affected by a project which are held in trust for the people of the State of California (California Environmental Quality Act Guidelines Section 15386 et seq.). The DFG recommends the following be included within the project DEIR:

1. The project will directly and cumulatively impact stream and wetland habitats through fragmentation, significant reduction of adjacent upland buffer areas and disruption of movement patterns in riparian and wetland-dependent species. The open space plan should provide open space areas adequate to support these species, and provide movement between on-site and off-site open space preserves. Buffers between wetland habitat and proposed development should be of sufficient width and should be designed to eliminate potential disturbance of fish and wildlife resources from noise, human activity, feral animal intrusion, and any other potential source of disturbance (Fish and Game Commission Policy, as amended 8/4/94).
2. The project's impact on State- or Federally-listed rare, threatened, or endangered species. The DFG recommends that surveys be conducted at the time of year when endangered or threatened species are both evident and identifiable. Field surveys should be scheduled to coincide with the appropriate

breeding or other life history stage of animals, when they are likely to be evident, or with peak flowering periods and/or during periods of phenological development that are necessary to identify a plant species of concern. Full biotic lists should be included in the Appendices of the EIR.

3. A red-tailed hawk was observed nesting on the project site during the 1999 breeding season (Per Clean Water Act Nationwide Permit #26, application Regulatory No. 199800668). Raptors and their nests are fully protected (Fish and Game Code Section 3503.5). Preproject surveys for nesting raptors must occur to avoid the potential "take" of raptor species. Nesting raptors must be provided a minimum 500-foot non-disturbance buffer.
4. The potential for alterations in the surface water hydrology, water quality and impacts to the aquatic resources, permanent streams, intermittent drainages and wetlands within the watershed of the subject project should be evaluated and mitigated in the Draft EIR. The DFG is particularly concerned with the cumulative impacts of runoff from the increase in impervious surface area resulting from the project. It is important that the hydrologic regime allow for the continued viability of the aquatic resource, while maintaining adequate floodflows from increased runoff without excessive maintenance of existing or enhanced riparian vegetation.
5. The DFG recommends that the project be designed so that the loss of oak trees is avoided. If the loss of oak trees is unavoidable, then a mitigation plan should be developed which results in the retention of the maximum number of mature oak trees in patches of no less than five acres. The mitigation should include the following:
 - A. Individual trees or groups of trees that are retained as a function of project design should be fully protected both during and after construction. During the construction of the project, a temporary protective fence should be established a minimum of 10 feet beyond the drip line of the retained oaks. Within this protective buffer, no grading, trenching, fill, or vegetation alteration should be allowed.
 - B. After project construction, a fact sheet describing the value and care of native oaks should be prepared and distributed to all residents. At a minimum, this fact sheet should encourage homeowners to avoid unnecessary pruning and encourage, except where a safety hazard occurs, the retention of snags. This fact sheet should be prepared by a qualified biologist.
 - C. Individual trees that are unavoidably lost due to project implementation should be fully mitigated through the planting of oak seedlings that are obtained from local genetic stock. We recommend a replacement rate of

Mr. George Djan
November 18, 1999
Page Three

5:1 for trees that are two inches or greater in diameter measured at breast height (dbh). We recommend a replacement rate of 1:1 for all trees less than two inches dbh. Every effort should be made to retain "heritage" oaks, that is, oaks in excess of 24 inches dbh.

- D. A five-year monitoring plan should be completed for all oak mitigation plantings. The monitoring plan should include appropriate irrigation schedules, as well as criteria for success and reestablishment during the five-year period. A success rate of no less than 80 percent at the end of the five-year monitoring period is recommended.
- 6. In order to comply with Public Resources Code Section 21081.6, a detailed monitoring program must be developed for all mitigation conditions. The monitoring program should include the following:
 - A. Specific criteria to measure the effectiveness of mitigation.
 - B. Annual monitoring for a minimum of five years. Annual written reports submitted to the lead agency and the DFG.
 - C. Annual monitoring reports, each of which include corrective recommendations that shall be implemented in order to ensure that mitigation efforts are successful.
- 7. The project applicant should be advised that work consisting of, but not limited to, diversion or obstruction of the natural flow or changes in the channel, bed or bank of any river, stream, or lake will require a DFG Streambed Alteration Agreement (Fish and Game Code Section 1600 et sec.).

The resource protection conditions which are made a part of the Streambed Alteration Agreement are subject to CEQA review and should be included in the environmental document for this project. Mitigation for the project MOU include, but may not be limited to, provisions for the following:

- A. Protect and maintain the riparian, wetland, stream or lake systems and to ensure a "no net loss" of riparian, wetland, stream, or lake habitat value or acreage. Vegetation removal should not exceed the minimum necessary to complete operations.
- B. Provisions for the protection of fish and wildlife resources at risk including various life stages of fish, the need for unimpeded migration past the project area, and protection of critical spawning and rearing habitats, as well as holding areas.
- C. Treatment of construction materials, spoils or fill, so that they cannot be washed into a stream or lake, or where it could cover aquatic or riparian vegetation.

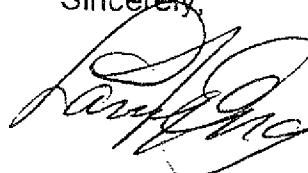

Mr. George Djan
November 18, 1999
Page Four

- D. Streams and wetlands must be provided buffers adequate to protect the aquatic resource during construction. No grading or construction activities should be allowed within these buffers.
- E. The potential for alterations in the surface water hydrology, water quality, and impacts to aquatic resources within the watershed. Mitigation may include but not be limited to oil/grit separators, detention ponds, buffering filter strips, silt barriers, etc., to prevent downstream sedimentation and pollution, while maintaining the area's historic hydrologic regime.
- F. Restoration of the area should include revegetation with trees, shrubs, and grasses native to the area. Plantings shall have a minimum 80% survival after the first year, and 100% survival thereafter; or shall have attained a 75% cover after three years, and 90% cover after five years. Plantings should be monitored each year and maintained as necessary until the success criteria have been met.

Early notification to the Department is recommended in order to determine the need for a Streambed Alteration Agreement. Specific conditions in the Agreement may include site-specific conditions for construction activities and timing. Any work subject to the Agreement may not be initiated until certification of the CEQA document and payment of the appropriate fees. The project proponent should contact the Sacramento Valley-Central Sierra Region for an application packet and fee schedule for this permit.

Thank you for the opportunity to review this project. If the DFG can be of further assistance, please contact Mr. Jeff Finn, Associate Wildlife Biologist, at (530) 477-0308.

Sincerely,

Larry L. Eng

Marchbrook Sunset Ranchos Annexation Request

Dear Ms. Abbas:

Thank you for the opportunity to comment on the Marchbrook Sunset Ranchos Annexation Request. Our comments are as follows:

- ♦ A traffic study needs to be completed to evaluate the impact on State Route 65 and any nearby interchange and intersections. The traffic study should address peak hour impacts and analyze the following conditions:
 - Existing conditions (without project)
 - Existing conditions with project
 - Cumulative conditions
 - Cumulative conditions plus project
 - Future (forecast five years in future with project)
- ♦ Mitigation measures should be identified where the project would have a significant impact. Caltrans considers the following to be significant impacts:
 - Off-ramps with vehicle queues that extend into the ramp's deceleration area or onto the freeway
 - Vehicle queues at intersections that exceed existing lane storage.
 - Project traffic impacts that cause the ramp's merge/diverge Level of Service (LOS) to be worse than the freeway's LOS
 - Project traffic impacts that cause the freeway or intersection LOS to deteriorate beyond LOS E for the freeway and LOS D for highways and intersections. (If the LOS is already "E" or "F", then a quantitative measure of increased queue lengths and delay should be used to determine appropriate mitigation measures.)

Ms. Sherri Abbas
December 4, 1998
Page 2

Possible mitigation measures to consider include:

- Widening interchange ramps to increase capacity
 - Modifying ramp terminal intersections
 - Increasing the ramp acceleration or deceleration lane length to improve merge/diverge operations.
- ♦ Future transportation systems assumed for cumulative conditions should only include those improvements which are included in the Placer County Transportation Planning Agency's most current Regional Transportation Plan.

Please provide our office with the additional information mentioned in the above comments. If you have any questions, please contact Cathy Felkins at (916) 323-5108.

Sincerely,

original s/b

RE: Northwest Rocklin General Development Plan Area
Marchbrook – Sunset Ranchos Project
General Plan Amendment, Prezoning
General Development Plan and Annexation

RECEIVED

Dear Mr. Djan,

The Rocklin Unified School District (the "District") wishes to provide the following comments to the City in anticipation of the preparation of the draft environmental report ("DEIR") for the Marchbrook – Sunset Ranchos Project and related area projects (the "Project") within the boundaries of the Northwest Rocklin General Development Area (the "Development Area").

Based upon preliminary information provided to the District, it is the District's understanding that the overall development as a part of the project, includes Sunset Ranchos along with the potential development of the Highway 65 corridor and Parcel K. As proposed, Sunset Ranchos along with the proposed development of Parcel K will generate 3,423 single family lots and 113 single family lots respectfully. The Project also proposes an additional 1,066 multiple family units within its boundaries. Based upon current student generation rates in effect within the District from new construction, these proposed single family and multi-family units will generate 1,628 students at grades kindergarten through 6th, 407 students at grades 7 through 8 and 610 students at grades 9 through 12.

Identification and Location of School Sites

The location of public school sites within the boundaries of any large development project are of critical importance to both the success of the project and the ability of the District to provide educational services in an effective and safe manner. The Draft

George Djan
December 14, 1999
Pg. 2

General Development Plan Zoning Diagram (the "Zoning Diagram") and the Draft General Plan Land Use Diagram (the "Land Use Diagram") both identify three elementary school sites that will presumably be located adjacent to or within residential zones. The proposed 10 acre elementary school sites are all three located along identified arterials serving the overall Project.

Currently, it is a goal established by the District to work cooperatively with the City to locate new elementary school sites adjacent to parks to maximize the public benefit associated with the development of the property and to make effective use of the joint resources of the District and the City. Presently, two of the proposed three elementary school sites set forth in the Zoning Diagram and the Land Use Diagram appear to be located adjacent to proposed City parks.

Additionally, in order to facilitate the design of an elementary school and to accommodate the traffic generated by elementary school use, two sides of each elementary school site should have public street frontage. Presently, not enough detail is contained within the Zoning Diagram or the Land Use Diagram to ascertain whether this is the case.

In regard to the issue of high school sites, the number of students to be generated from both Sunset Ranchos and Parcel K justify the identification of a high school site within the boundaries of the Development Plan area. Currently, enrollment at the high school level in the District is near or at capacity and the construction of any development of the scale of that proposed in the Development Plan Area will require the acquisition and construction of secondary school facilities to serve residential development. Locating the high school site adjacent to two public streets is an important design criteria for the same reasons described above pertaining to elementary school sites. In addition, the high school site should be in the range of 40 to 50 acres depending upon site configuration and condition of property.

- At the District's earliest opportunity, the District looks forward to meeting with representatives from the City and the proposed developers to discuss in more specific detail, the siting, configuration and process for acquisition of the respective school sites identified and to be identified in the boundaries of the Development Plan Area.

School Construction Funding Issues

Separate from the location of actual school sites, the manner in which the development of new schools is funded is of critical importance to the community. Presently, the District funds new school site acquisition and new school construction through a combination of

George Djan
December 14, 1999
Pg. 3

revenue sources. These sources include local revenues derived from developer fees, Mello-Roos special taxes and general obligation bonds along with State revenues obtained from the State school building construction program.

In regard to the developer fee component of this funding program, the State of California presently authorizes two, independent developer fee programs. The first program, known as "Stirling Fees" has a maximum fee cap of \$1.93 per square foot. A second program, implemented under the provisions of 1998 legislation known commonly as Senate Bill 50 ("SB 50") authorizes school districts to implement fees in an amount adequate to fund up to approximately 50% of the total cost of land acquisition and new school construction.

Presently, the District has a Stirling Fee in effect in an amount less than the \$1.93 per square foot cap. The District has not implemented fees yet under the authority of SB 50. Fee revenue obtained from the Stirling Fee is used by the District to fund a portion of its middle school land acquisition and construction costs.

The District has established Mello-Roos Community Facilities Districts No. 1 and 2. Special tax proceeds from these districts is utilized in combination with State revenue to fund the cost of elementary school site acquisition and elementary school construction.

Finally, local general obligation bonds have been used along with other sources to fund acquisition and expansion of current Rocklin High School facilities.

In the event development is allowed to proceed in the Development Plan Area, the District's Mello-Roos special tax funding authority would not apply to the Development Plan Area unless affirmative steps were taken by the District, the City and the proposed developers. This could include the annexation of all or a portion of the Development Plan Area into the District's existing Community Facilities District No. 2 or it could include the establishment of a new Mello-Roos Community Facilities District structured in a manner suitable to the needs of the overall development project.

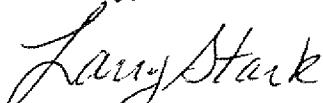

Without assurance that the Mello-Roos funding component will be available within the boundaries of the Development Plan Area, the District will not be able to ensure that adequate elementary school facilities will be constructed when needed to serve the area. Likewise, depending upon the availability for State revenues for middle school facilities and high school facilities, comparable, alternative funding arrangements may be desirable to serve the area.

George Djan
December 14, 1999
Pg. 4

The District is pleased that the City has determined that annexation and development of the Development Plan Area will require the preparation of an environmental impact report and requests that these issues be included and evaluated in the context of the EIR. In addition, however, to the extent the City will be providing entitlements to one or more developers within the Development Plan Area, the District requests that such entitlements be tied, whenever feasible, to adequate assurance and specific arrangements to ensure the provision of new school sites and school facilities in a timely fashion. Further, to the extent one or more development agreements are proposed to be entered into for projects in the Development Plan Area, the District requests to be kept informed of such process and would look forward to the opportunity to participate in the negotiations leading to the drafting and ultimate signing of any such development agreements.

In the meantime, please forward these comments as you deem necessary to those firms and individuals participating in the evaluation of the proposed Development Plan Area and its annexation to the City. In addition, do not hesitate to contact me with any follow-up comments, questions or suggestions you may have.

Sincerely,

Larry Stark
Director of Facilities

Rocklin, CA 95677

Subject: **Notice of Preparation of a Draft Environmental Impact Report for Marchbrook/SunsetRanchos Project**

Dear Mr. Djan:

This is in response to the City of Rocklin's request for comments on the Notice of Preparation of a Draft Environmental Impact Report (EIR) for the Marchbrook/Sunset Ranchos Project. The Placer County Planning Department appreciates the opportunity to respond to this proposal given that the project is currently within the unincorporated area of Placer County.

ENVIRONMENTAL ISSUES:

The Draft Environmental Impact Report for this project should address and provide appropriate mitigations for the following issues:

1. **Land Use** - The EIR should discuss the compatibility of the proposed land uses in the plan area with the surrounding land uses within Placer County to the west and the City of Lincoln to the North. In order to reduce impacts on adjacent land uses, buffer areas should be developed adjacent to portions of the plan areas that coincide with open space areas to the north in the City of Lincoln. Buffers may also be necessary to separate commercial/industrial from adjoining residential properties within and outside the plan area.
2. **Flooding** - The project area is encumbered by floodplains associated with Orchard Creek. The EIR should address the flood hazard potential for the project site as well as the project's contribution to downstream flooding.
3. **Resource-Based Land Use Limitations** - There is a potential for sensitive habitat areas to exist within the plan area, particularly vernal wetland resources. Where such resources are to be preserved on site, suitable buffers need to be established between impervious surfaces and the habitat resource portion of Orchard Creek which passes east to west through the plan area. In order to reduce impacts to riparian habitat and water quality this creek corridor should be preserved from development (including all impervious surfaces) with a minimum setback of 100 feet from the centerline of the creek or the standard structural setback should be measured from the edge of the 100-year floodplain, whichever is greater. A setback of 50 feet from centerline of the stream channel should be required for all branches of Orchard Creek which intersect the main east-west trunk of the stream.

4. County Services and Facilities - The subject project will generate a demand for County services and facilities in excess of revenues derived from the property for these services and facilities. The cumulative loss of services over time, due to insufficient revenues, could result in detrimental environmental impacts. The EIR should evaluate the potential environmental impacts associated with a degradation of County services and how such impacts can be mitigated. In order to mitigate this impact, this project should be conditioned to contribute to Placer County's Capital Facilities Impact Fee Program.

DEVELOPMENT STANDARDS:

The following development standards are suggested to the City in order to provide assistance in the conditioning of the project:

1. The Sunset Industrial Area Plan indicates that the purpose of the Highway 65 Business Park planning area (identified as Business Professional / Commercial / Light Industrial [BP/COMM/LI] in the project proposal) is to specifically identify an area for a mix of light industrial and office uses in a high quality campus-like setting. Preferred land uses include high-technology manufacturing and assembly, warehousing, professional offices, research and development, and commercial uses that are primarily for the support of the employees of other businesses in the Sunset Industrial Area. Prohibited land uses include outdoor manufacturing or storage, or uses which emit appreciable amounts of visible gasses, particulate, steam, heat, odor, vibration, glare, dust or excessive noise. Heavy industrial uses could be permitted provided that all industrial activities are confined to the interior space of the building(s) and none of the above listed prohibited uses exist or are apparent on the property.

2. Two of the areas designated for BP/COMM/LI uses have specific restrictions affecting the timing of development in the Sunset Industrial Area Plan. The areas are located on the east side of S.R. 65 on the north and south sides of the North Whitney Boulevard interchange right-of-way. These parcels should not be developed for uses other than agriculture or open space until such time that a state highway interchange is constructed at North Whitney Boulevard and S.R. 65 or construction of an arterial roadway connection to existing arterials in Lincoln or Rocklin. This restriction should be placed as a land development standard and as a policy in the proposed plan area because the North Whitney Boulevard interchange is considered to be a long term project, (i.e., post 2015), and because no funding is currently provided in the Sunset Industrial Area Plan Capital Improvement Program nor in the S.R. 65 Joint Powers Authority Capital Improvement Program. An at-grade intersection on S.R. 65 at North Whitney Boulevard is not a viable component of the area's circulation improvements.

3. The following minimum setbacks should be established in the BP/COMM/LI plan area to be provide consistency with projects in Placer County and help reduce the visual impact of future projects.

a. Primary Frontage Setback - 125 feet. The primary frontage is adjacent to S.R. 65 or major arterial with four or more traffic lanes, or adjacent to any other roadway determined to be visually sensitive.

4. In order to avoid the risk of flooding within this area, the City should carefully consider development near these drainages. A flood hazard zone should be applied to property in the plan area in order to ensure that an adequate review is conducted in order to analyze the effect of development on the creek and conversely the effect of the creek on development. Floodplain delineations and drainage reports should be required and reviewed during project review.

5. The architectural standards for the BP/COMM/LI plan area should be developed to the highest standard for the Sunset Industrial Area (SIA). The reasons for this standard are two-fold: 1) the location of the this district is along Highway 65 and as such these properties have the greatest amount of visibility in the SIA, and 2) a higher architectural standard will enhance and improve the character of the SIA and make the area more attractive and competitive with other areas when seeking to encourage primary wage-earner employers to locate in the area.

Thank you again for your consideration of our comments. If you have any questions regarding these comments, please do not hesitate to contact me directly.

Sincerely,

PAUL THOMPSON

Dear Steve,

RE: Marchbrook Sunset Ranchos
Proposed School Sites

Thank you for the subject map showing the locations for the proposed school sites. As you proceed with the design of this project, remember that the school sites should be located in residential areas with street frontage on at least two sides. Co-location with a park is desirable for the elementary sites.

Adjacency to commercial property, including separation by a street, should be avoided. If you have any questions or concerns or have a particular issue you would like us to review, please call.

Sincerely,

Larry Stark

Dear Mr. Dijan:

Thank you for the opportunity to comment on the Marchbrook Sunset Ranchos Annex . Our comments in our letters of November 3, 1999 and December 4, 1998 (copies enclosed) are still applicable. We have the following additional comments:

- A circulation phasing analysis should be provided. A right-turn only connection from Whitney Blvd. to Hwy 65 is currently under consideration.
- What level of development will be allowed before the Whitney Interchange is constructed?

Please provide our office with a copy of any future actions, conditions, and mitigation regarding this project. If you have any questions concerning these comments, please contact Rebecca Sanchez at (916) 324-6634.

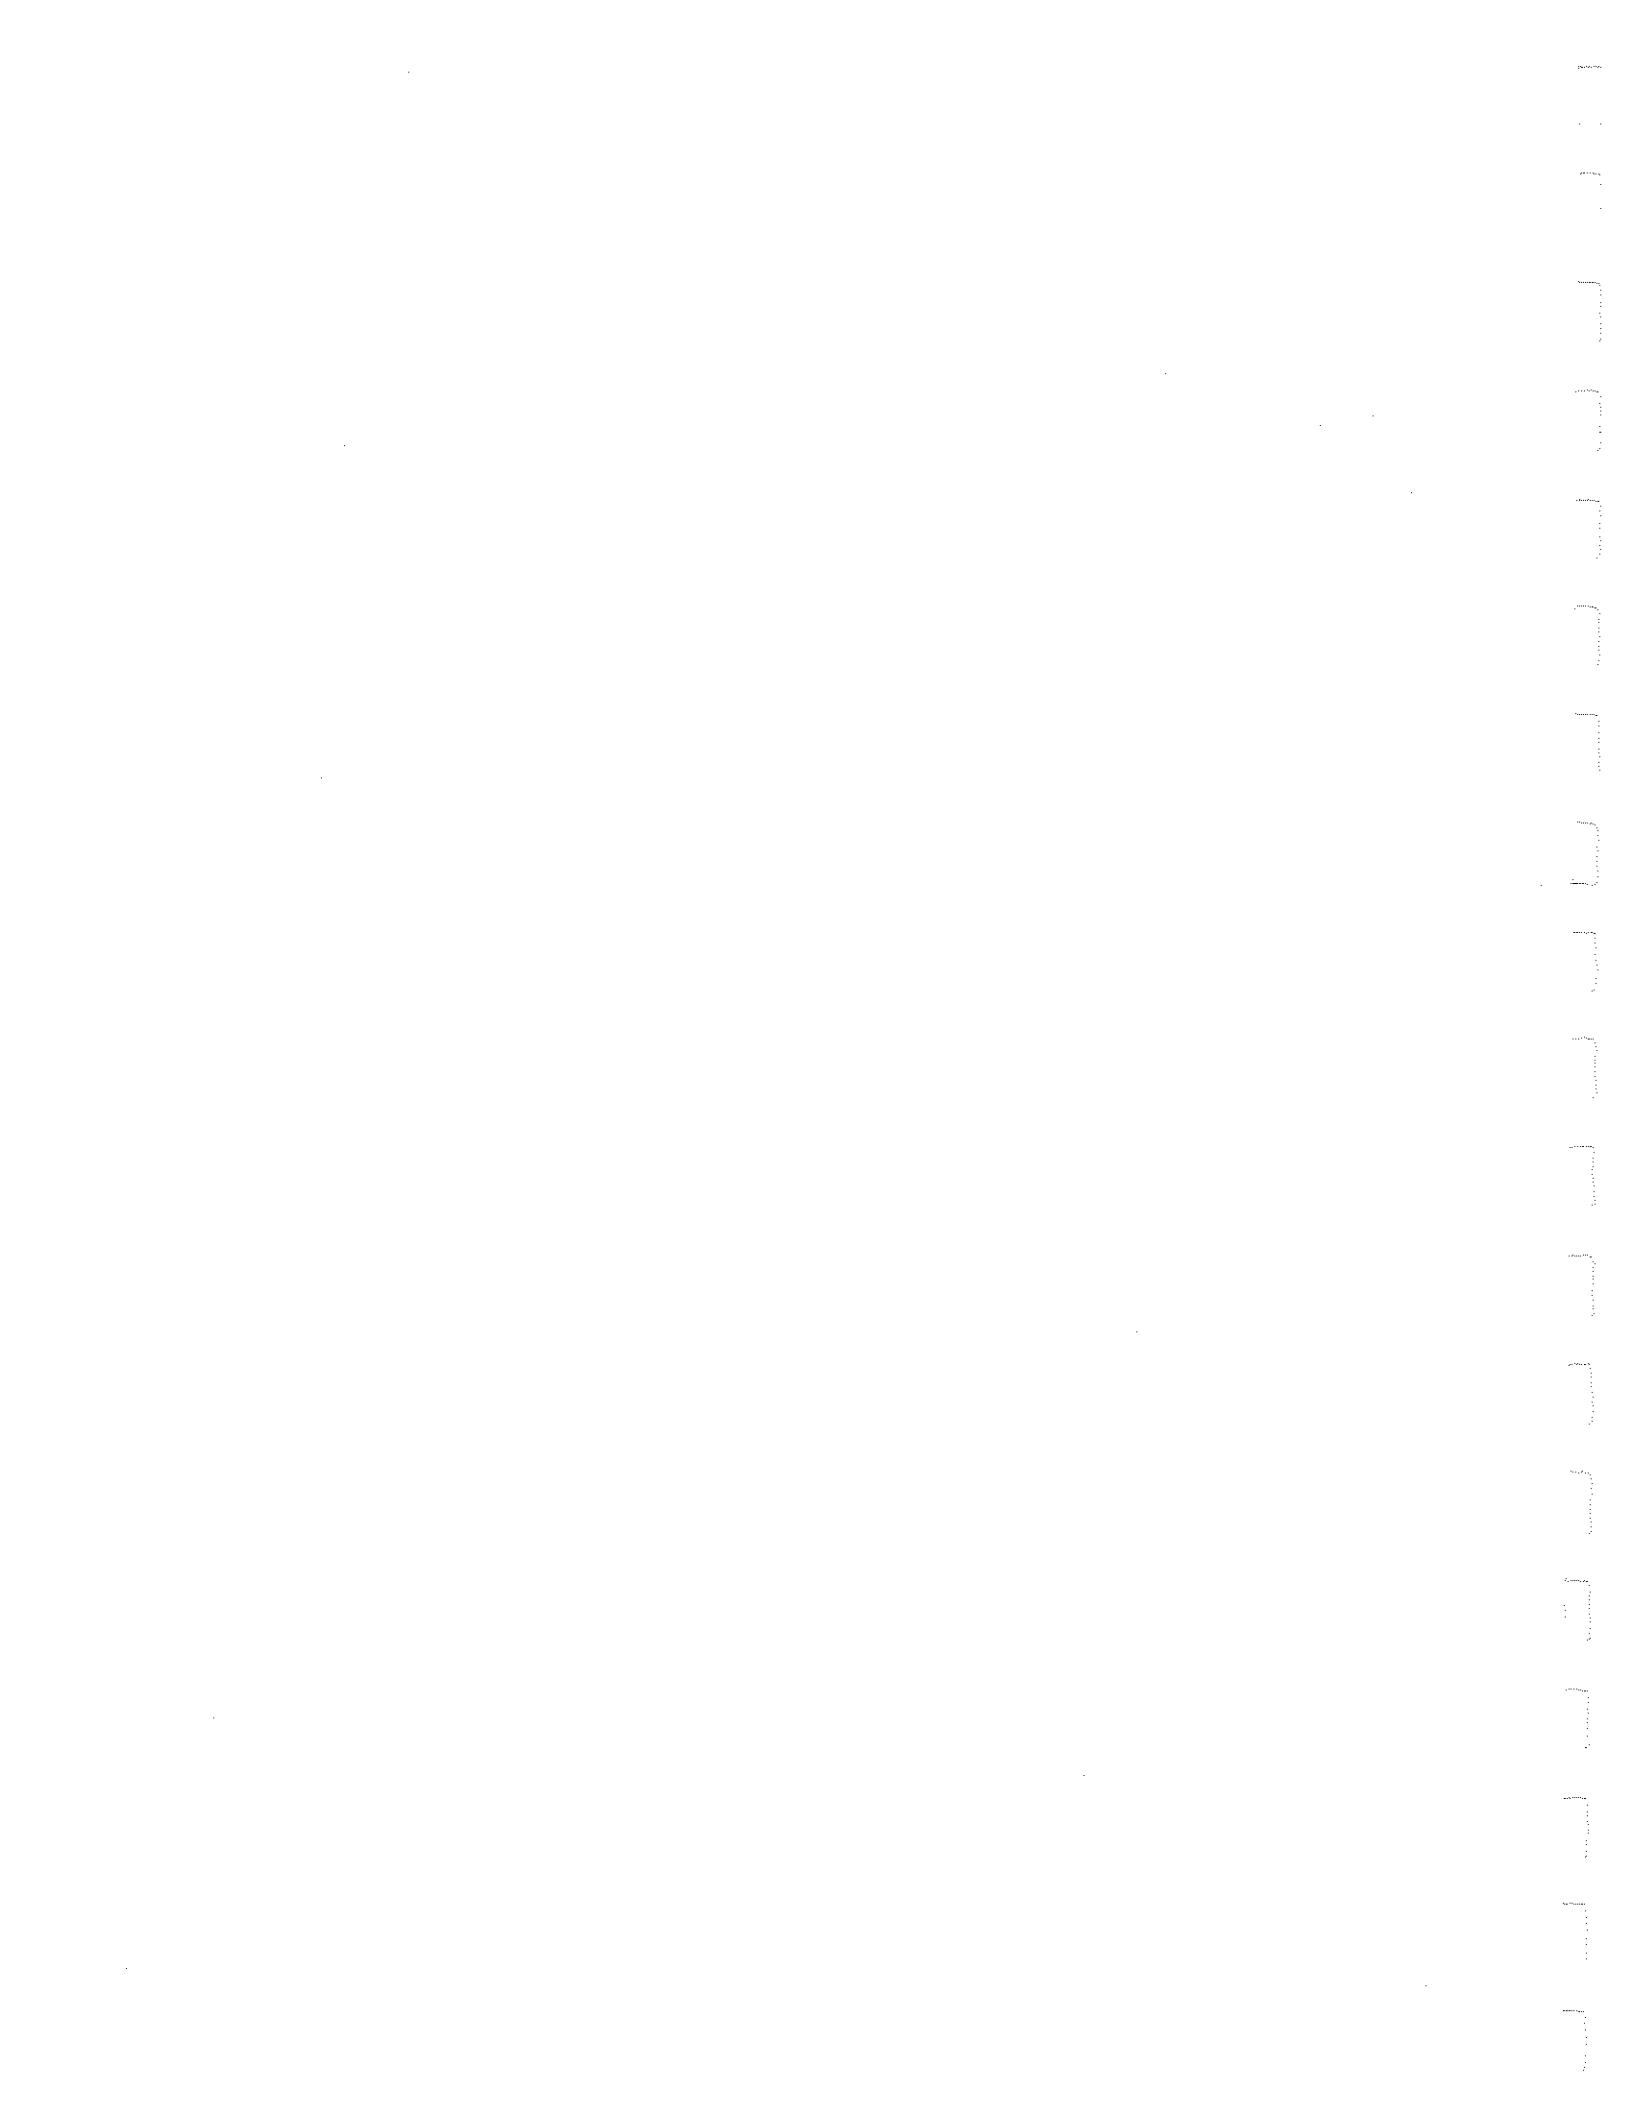

Sincerely,

OPERATIONAL (Vehicle) EMISSION ESTIMATES

Analysis Year: 2020 Temperature (F): 85 Season: Summer

EMFAC Version: EMFAC7G (10/96)

Summary of Land Uses:

Unit Type	Trip Rate	Size	Total Trips
Single family housing	9.00 trips / dwelling unit	2970.00	26,730.00
Condo/townhouse genera	6.50 trips / dwelling unit	1067.00	6,935.50
Regnl shop. center < 5	35.00 trips / 1000 sq. ft.	873.00	30,555.00
Office park	17.70 trips / 1000 sq. ft.	2041.00	36,125.70
General light industry	7.60 trips / 1000 sq. ft.	823.00	6,254.80
Industrial park	125.10 trips / acres	70.00	8,757.00
Manufacturing	7.60 trips / 1000 sq. ft.	358.00	2,720.00

Vehicle Assumptions:

Fleet Mix:

Vehicle Type	Percent Type	Non-Catalyst	Catalyst	Diesel
Light Duty Autos	75.00	1.16	98.58	0.26
Light Duty Trucks	10.00	0.13	99.54	0.33
Medium Duty Trucks	3.00	1.44	98.56	
Lite-Heavy Duty Trucks	1.00	19.56	40.00	40.44
Med.-Heavy Duty Trucks	1.00	19.56	40.00	40.44
Heavy-Heavy Trucks	5.00		100.00	
Urban Buses	2.00		100.00	
Motorcycles	3.00	100.00	% all fuels

Appendix G

Water Forum Proposal Executive Summary Excerpt

APPENDIX G – WATER FORUM PROPOSAL EXECUTIVE SUMMARY EXCERPT

To provide the reader of this EIR with an understanding of the Water Forum Proposal, selected text from that document's Executive Summary follows immediately.

The Water Forum, a diverse group of water agencies, business groups, agricultural interests, environmentalists, citizen groups, and local governments (also known as stakeholders), has been working since the fall of 1993 evaluating future water needs and supplies in the Sacramento area, including parts of Sacramento, Placer and El Dorado counties. The Water Forum has formulated a Water Forum Proposal (WFP) for the effective long-term management of the region's water resources. This proposal is incorporated in the Water Forum Action Plan which is being circulated concurrently with this document. The WFP was formulated based on the two coequal objectives of the Water Forum: 1) provide a reliable and safe water supply for the region's economic health and planned development through the year 2030; and 2) preserve the fishery, wildlife, recreational, and aesthetic values of the Lower American River.

Preservation of the Lower American River is one of the coequal objectives of the WFP. The direct effect study area, therefore, consists of those areas that would be directly affected by additional surface water diversions from the American River. Such diversions would occur above Folsom Reservoir, from Folsom Reservoir proper, Lake Natoma, and from the Lower American River, defined as the reach from Nimbus Dam to the confluence with the Sacramento River. Therefore, the direct effect study area consists of the in-stream and riparian areas of these surface water resources.

The indirect effect study area is the broader geographic area that encompasses the surface water resources and facilities outside of the Lower American River that may be affected by the WFP. This area includes the Central Valley Project (CVP) and State Water Project (SWP) systems both upstream of the confluence of the Sacramento and American rivers (exclusive of the direct effect study area), along with associated reservoirs and rivers, and downstream of the confluence, into and including the Sacramento-San Joaquin Delta. The water service study area consists of the communities served by Water Forum stakeholders, and is coincident with the boundaries of stakeholder purveyors in the cities of Sacramento, Folsom, Citrus Heights, and Galt; County of Sacramento (excluding the Delta); the City of Roseville; South Placer County and western El Dorado County.

Elements of the Water Forum Proposal

To achieve the Water Forum's coequal objectives, a comprehensive package of linked actions has been developed to make more water available for consumption while protecting the natural resources of the Lower American River from environmental damage. This approach requires the support and participation of each of the Water Forum stakeholders. The WFP was developed over a period of years by representatives of the Water Forum stakeholder groups, and includes seven elements:

Element:

- I Increased Surface Water Diversions**
- II Actions to Meet Customers' Needs While Reducing Diversion Impacts on the Lower American River in Drier Years**
- III Support for an Improved Pattern of Fishery Flow Releases from Folsom Reservoir**
- IV Lower American River Habitat Management Element**
- V Water Conservation**
- VI Groundwater Management**
- VII Water Forum Successor Effort**

Element I: Increased Surface Water Diversions

This element provides for increased surface water diversions. These increased diversions will be needed to serve planned growth through the year 2030 even with the active conservation programs and the recommended sustainable use of the groundwater which are also part of the WFP. As part of the WFP, all signatory organizations would support the diversions agreed to for each supplier. All signatory organizations would also support the facilities needed to divert, treat and distribute this water. Support for increased diversions is linked to the suppliers' endorsement and, where appropriate, participation in each of the seven elements.

Element II: Actions to Meet Customers' Needs While Reducing Diversion Impacts on the Lower American River in Drier Years

This element is to ensure that sufficient water supplies will be available to customers in dry years as well as wet years, and that suppliers continue to meet their customers' needs to the year 2030 while minimizing diversion impacts on the Lower American River in the drier and driest years. It is envisioned that Lower American River diversions above the H Street Bridge in average and wetter years will increase from the current level of about 216,500 acre-feet (AF) annually to about 481,000 AF annually. This represents a significant portion of the total annual flow of the American River which averages about 2.6 million AF with a range of less than 400,000 AF to greater than 6.3 million AF. Actions to meet customers' needs while reducing diversion impacts on the Lower American River in drier years include: conjunctive use of groundwater basins consistent with the sustainable yield objectives; utilizing other surface water resources; reoperation of reservoirs on the Middle Fork of the American River; increased conservation during drier and driest years; and reclamation. Some of these actions would also help reduce impacts outside of the American River watershed.

Element III: Support for an Improved Pattern of Fishery Flow Releases from Folsom Reservoir

This element supports needed assurances for continued implementation of a pattern of water releases from Folsom Reservoir that more closely matches the needs of anadromous fish, in particular fall run chinook salmon, which need more cool water in the fall and are not present in the American River in the summer.

Beginning in December 1994, the Water Forum convened a Fish Biologists' Working Session of fish experts with special knowledge of the Lower American River. Their charge was to develop recommendations for an improved pattern of releases from Folsom Reservoir. Participants included representatives from the U.S. Fish and Wildlife Service (USFWS), California Department of Fish and Game (CDFG), State Water Resources Control Board (SWRCB), U.S. Bureau of Reclamation (USBR), and representatives from the Water Forum. The group came to general agreement regarding which fish species in the Lower American River should be given priority when there are constraints in water availability and developed an Improved Pattern by which available water can be released from Folsom Reservoir in a "fish friendly" manner consistent with the reservoir's flood control objectives.

The Central Valley Project Improvement Act was passed in 1992. This law authorized fish and wildlife restoration as an additional purpose of the Central Valley Project. It also required the federal government to develop an Anadromous Fish Restoration Program (AFRP) plan including implementation of an improved pattern of fishery flow releases from Folsom Reservoir to benefit anadromous fish. The Water Forum recommendations were considered by the U.S. Department of the Interior when it developed its recommendations for AFRP flows for the Lower American River.

Since 1995 USBR, in consultation with the USFWS and CDFG, has attempted on a voluntary basis to release water from Folsom Reservoir in a manner consistent with the flow objectives for the Lower American River to the extent USBR's available water supply has permitted it to do so. Their AFRP flow objectives for the Lower American River are set forth in the November 20, 1997 "Department of the Interior Final Administrative Proposal on the Management of Section 3406 (b) (2) Water." They are essentially the same as the Improved Pattern of Fishery Flow Releases developed by the Fish Biologists' Working Session which was convened by the Water Forum. It is recognized that as additional information becomes available in the future it could be beneficial to further refine this Improved Pattern.

For purposes of the Water Forum Proposal, the Improved Pattern of Fishery Flow Releases is defined as the AFRP flow objective for the Lower American River as set forth in the November 20, 1997 "Department of the Interior Final Administrative Proposal on the Management of Section 3406 (b) (2) Water."

Signatories agree to recommend that the updated Lower American River standard be included in the USBR's permit for operation of Folsom and Nimbus dams. It will incorporate two of the Water Forum Proposal provisions:

- (1) Agreement on water diversions upstream of Nimbus Dam under varying hydrologic conditions; and
- (2) The Improved Pattern of Fishery Flow Releases which would be implemented essentially the same as the AFRP Lower American River flow objectives in the November 20, 1997 Final Administrative Proposal.

Element IV: Lower American River Habitat Management Element

This element, combined with an "Improved Pattern of Fishery Flow Releases from Folsom Reservoir" and "Actions to Meet Customers' Needs While Reducing Diversion Impacts on the Lower American River in the Drier Years," is included to mitigate the impacts of the increased diversions on the Lower American River. The Water Forum Habitat Management Element (HME) will be part of a coordinated multi-agency Lower American River ecosystem partnership established by a Memorandum of Understanding. Agencies expected to participate include: the Water Forum Successor Effort (legally administered by the City of Sacramento under the auspices of the City-County Office of Metropolitan Water Planning); the Sacramento Area Flood Control Agency (SAFCA); CALFED (or its successor); USBR (responsible for administering the Central Valley Project [CVP] and the Central Valley Project Improvement Act [CVPIA]); USFWS; National Marine Fisheries Service (NMFS); CDFG; and the Sacramento County Parks Department (which administers the Lower American River Parkway Plan). The multi-agency program will contain four components that together will address flow, temperature, and physical habitat issues for the Lower American River:

- Habitat Management Plan Development, Updating, and Technical Assistance;
- Projects that benefit the Lower American River Ecosystem;
- Monitoring and Evaluation Program; and
- Project-Specific Mitigation (which will remain the responsibility of each supplier).

In addition, because summertime recreation flows in the Lower American River are expected to be adversely affected by increased diversions, the Water Forum Proposal also includes commitments to fund projects to mitigate recreational impacts.

Element V: Water Conservation

The Water Conservation Element of the WFP promotes more efficient use of limited water resources. This element is essential to meeting both of the coequal objectives of the Water Forum. Conserved water will be available to help supply the region's water needs and will minimize the need for increased groundwater pumping and increased use of surface water, including water diverted from the American River. Major components of the Water Conservation Element include: residential water meters; other water conservation programs similar to the Best Management Practices included in the statewide Memorandum of Understanding Regarding Urban Water Conservation; public involvement; water conservation plans; and agricultural water conservation. The water conservation practices in the element have been defined considering the specific circumstances of the Water Forum stakeholders. The element does not preclude implementing other, more aggressive conservation approaches to the extent additional, feasible measures become available in the future.

Element VI: Groundwater Management

This element provides a framework by which the groundwater resource in Sacramento County can be protected and used in a sustainable manner and a mechanism for coordination with those

adjacent counties that share the groundwater basin. A key provision of the element includes recommendations on "sustainable yield," which is the amount of water that can be safely pumped from the basin over a long period of time without damaging the aquifer. Estimated average annual sustainable yield recommendations for each of the three sub-areas of the basin are: North Area: 131,000 AF; South Area: 273,000 AF; and Galt Area: 115,000 AF. Recommendations for locally controlled groundwater management include monitoring groundwater withdrawal and "conjunctive use", or the planned use of surface water in conjunction with groundwater. The Sacramento North Area Groundwater Management Authority was established in August, 1998 through adoption of a joint powers authority using the existing authority of the City of Sacramento, the City of Folsom, the City of Citrus Heights, and the County of Sacramento. The Authority will be charged with facilitating conjunctive use programs and maintaining long-term sustainable yield. Discussions about groundwater management in the South Area and the Galt Area will be undertaken by the Water Forum Successor Effort.

The groundwater management governance structure should facilitate participation by water agencies with specific and relevant interest in the groundwater governance structure outside of Sacramento County and encourage cooperation and collaboration with such agencies.

Element VII: Water Forum Successor Effort

In order to ensure implementation of the WFP, a Water Forum Successor Effort will be created with membership consisting of those organizations signatory to the WFP. Its responsibilities will be to oversee, monitor, and report on implementation of the WFP. The Water Forum Successor Effort will not have any authority to govern or regulate.

Essential Actions to be Carried Out by Other Agencies

Three projects anticipated to be carried out by other agencies are essential for the overall WFP:

- Temperature Control Device for the urban water intake from Folsom Dam;
- Optimal use of the cold water pool in Folsom Reservoir; and
- Improved Pattern of Fishery Flow Releases from Folsom Reservoir.

In the analysis of the WFP impacts, each of these projects is assumed to be in place in the future.

Process for Environmental Review and Adoption of the Water Forum Agreement

The environmental review process and the WFP process are taking place concurrently in a manner that allows the integration of public and agency comments into the planning process. The public and agency review of the Draft EIR and the stakeholders' review of the Agreement will provide comments that will be used in refining the WFP. As the CEQA Lead Agencies, the City and County of Sacramento each have the authority to certify the Final EIR. After Final EIR certification, the stakeholders of the Water Forum will be asked to approve the Agreement and agree to participate in its implementation. If the public agency stakeholders rely on the EIR in deciding whether to approve the Agreement they will act as Responsible Agencies under CEQA. The Agreement will be implemented by the Water Forum Successor Effort representing the stakeholders who adopt the proposal.

After approval of the Agreement by the Water Forum stakeholders, the Final EIR will be forwarded to other agencies for their consideration in connection with (1) their responsibilities as State Trustee Agencies, as defined by State CEQA Guidelines §15386 and/or (2) separate, subsequent actions potentially needed for the plan's implementation. State Trustee Agencies and other affected state agencies include: California Department of Water Resources (DWR), State Water Resources Control Board (SWRCB), State Lands Commission (S.C.), CDFG, California Department of Parks and Recreation, and State Historic Preservation Office (SHPO). Federal agencies which may have separate, subsequent actions related to the plan's implementation include the USBR, USFWS, NMFS, and U. S. Army Corps of Engineers (USACE). The Final EIR will provide program-level technical analysis which may support environmental review of implementation actions and their project-level environmental documents.

Approach for Environmental Analysis Recognizing Mitigating Features of the Water Forum Proposal

In reviewing the environmental impacts and mitigation measures described in this document, it is important to understand the context in which the WFP was developed. Because one of the Water Forum's coequal objectives is the preservation of the fishery, wildlife, recreational and aesthetic values of the Lower American River, the WFP is designed to minimize adverse environmental impacts to the extent feasible. The WFP contains seven elements, each integral to the overall agreement. Element I, Increased Surface Water Diversions, provides for increased diversions from the Lower American River. The remaining six elements all, in one way or another, are intended to reduce the adverse impacts of those increased diversions. Therefore, the project itself reduces the impacts to the environment, through negotiated measures throughout the proposal.

For example, Element II, Actions to Meet Customers' Needs While Reducing Diversion Impacts on the Lower American River in Drier Years, contains provisions by which purveyors agree to reduce their diversions from the Lower American River by specified levels in defined drier years. These actions include extraordinary conservation during the driest years beyond that included in Element V of the WFP. These cutbacks will decrease the severity of the adverse impacts to the river in drier years. These reduced levels of diversions are an integral part of the WFP, and the modeling of impacts in this EIR assumes these reductions. In addition, in defined "driest" years (also known as "conference years"), the WFP signatories will meet and confer regarding diversions and river flows.

Similarly, Element III, Support for a Improved Pattern of Fishery Flow Releases From Folsom Reservoir, provides for the operation of Folsom in a manner that more closely matches the needs of anadromous fish, particularly fall run chinook salmon. One of the essential requirements of the WFP is that this improved flow standard be incorporated into the long-term management of Folsom and Nimbus Dams.

Element IV, the Habitat Management Element (HME), provides for Water Forum participation and funding of a multi-agency Habitat Management Program (HMP) for the Lower American River. The WFP supports habitat improvements and other ecosystem-enhancing projects for the river, which are to be contained in the Implementation Plan of the HMP, described in more detail

in Appendix B to this EIR. The HME also includes commitments to fund projects to mitigate adverse recreational impacts of the WFP identified in this Draft EIR.

However, because the details of the Water Forum Successor Effort's Implementation Plan for the Habitat Management Program are still being worked out, this Draft EIR, in identifying the adverse impacts of the WFP, does *not* include the benefits of the habitat improvement components of the HMP.

It does, however, assume the implementation of an Improved Pattern of Fishery Flow Releases, the Folsom Dam Temperature Control Device, and Folsom Reservoir Optimal Cold Water Pool Management all of which are necessary for the WFP to be effective. Therefore, this EIR describes aspects of the proposed HMP that will provide additional benefit to the Lower American River beyond what is the basis of impact analysis of the EIR.

Element V, the Water Conservation Element of the WFP, commits purveyors to specified water conservation programs. The diversions identified in the WFP reflect the reduced demand resulting from these conservation programs.

Element VI, the Groundwater Management Element, includes conjunctive use programs that provide for storing water in the wet years so that groundwater can safely be used in dry years, conserving surface water supplies. Several of the elements in the WFP would reduce impacts on, CVP and State Water Project (SWP) water deliveries, CVP hydropower generation, Shasta Reservoir, and Folsom Reservoir. These elements of the WFP include Water Conservation, Groundwater Management, and some of the Actions That Meet Customers' Needs While Reducing Diversion Impacts on the Lower American River in Drier Years. The analysis on this Draft EIR reflects implementation of all of the elements.

Based on the State CEQA Guidelines, the impact assessment approach is focused on identifying potential impacts due to implementation of the WFP. It is important to note that there are numerous programs underway or planned to improve fishery conditions for Sacramento River Valley fisheries, particularly salmonid fisheries, including the AFRP of the CVPIA and the Ecosystem Restoration Program Plan of the CALFED Bay-Delta Program.

When implemented over the next several decades, these and other future programs are expected to improve fishery conditions. However, it is not possible at this time to quantify all the benefits of those programs. [This means that the quantitative analyses and impact determinations in the Water Forum Proposal EIR do not reflect anticipated benefits of those programs.]

The EIR identifies environmental impacts and additional mitigation measures, to further reduce adverse impacts, for consideration by the Water Forum stakeholders. As described below, certain impacts are considered significant and unavoidable.

Response to Impacts on the Sacramento River and the Bay-Delta

As discussed previously, the WFP already includes many provisions that would reduce impacts. These include potential aquatic impacts of increased diversions on the Sacramento River and the Bay-Delta. Even with these actions, unless additional water supplies are developed or diversions

are reduced, there would still be remaining impacts on the Sacramento River and the Bay-Delta, especially under cumulative conditions, based on the scenario addressed in this EIR (refer to Table 2-3 and Chapter 6).

When purveyors in the American River watershed exercise area-of-origin water rights, it will reduce the amount of water available from Folsom Reservoir for use by USBR in meeting Sacramento River and Bay-Delta environmental and water delivery obligations. The USBR will have to operate its entire system, including Shasta and Folsom Reservoirs, differently in order to meet those obligations. Unless additional supplies are developed or diversions are reduced, this would result in impacts on the Sacramento River, above and below the American River, and the Bay-Delta.

The USBR will be involved in almost all of the diversion projects included in the WFP. In some cases the USBR needs to issue a contract for a new water supply. In other cases, it has to sign a Warren Act agreement or grant a right-of-way.

In order to take any of these actions, the USBR is required to consult with the resource agencies under Section 7 of the Endangered Species Act (ESA). In addition to Water Forum actions, the consultation will also cover the USBR's entire Operational Criteria and Plan (OCAP) for the CVP.

Under the ESA, the USBR is prohibited from taking any actions that will jeopardize the continued existence of threatened or endangered species. Resource agencies participate in the ESA process by developing biologic objectives for species listed or proposed for listing. Biological objectives serve as specific performance criteria which are included in the biological opinions under the ESA. The USBR is required by the ESA to operate the CVP in a way that meets the biologic objectives set for each species listed or proposed for listing.

Because resource agencies are in the process of developing these biological objectives, it is impossible to specify performance criteria at this time. That uncertainty is combined with uncertainty over the extent and effectiveness of several future actions to protect Sacramento River and Bay-Delta resources. Therefore, it is impossible at this time to formulate specific mitigation measures for Sacramento River or Bay-Delta aquatic impacts or to assign responsibility for the mitigation.

The Water Forum Proposal EIR is a Program EIR and it is recognized that individual projects included in the WFP will need to comply with CEQA and, where applicable, the National Environmental Policy Act (NEPA) and the state and federal Endangered Species Acts. Compliance with the state and federal Endangered Species Acts may result in diversion restrictions or other conditions beyond those that are included in the WFP.

INTRODUCTION

General

This report provides the Preliminary Master Drainage Plan (Plan) and criteria design for project facilities within the Marchbrook–Sunset Ranchos (Project) located in the Placer County, California. Supplemental drainage reports will be submitted for each subsequently proposed construction project and subdivision. The supplemental reports will utilize the information developed in this Report for the design of drainage facilities once the areas master plan has been approved.

The Project is located south of the City of Lincoln near the east side of SR65, west of Whitney Oaks (in the City of Rocklin) and abuts the City of Rocklin on the south side. The location of the Project is shown on Figure 1.

The Project is a proposed master plan community consisting of residential, commercial/business, parks, schools, roads and open space uses.

Just west of the Project (between the Projects west boundary and SR65) is an area proposed for development as business professional. This area is included in the drainage study although not in as great a detail under the developed conditions as is the Project area.

The Project and the area west of the Project to SR65 is proposed for annexation to and development in the City of Rocklin.

The Project is located in four drainage basins as follows:

1. Orchard Creek Main Channel:
Middle north to west portion drainage basins consisting of approximately 184 acres. This area consists of several sub areas draining north and thence west through the Twelve Bridges project in the City of Lincoln to existing culverts crossing under SR65;
2. Orchard Creek Tributary #2-1:
Northwest portion drainage basins consisting of approximately 78 acres. This area drains north then west to existing culverts crossing under SR65.
3. Orchard Creek Tributary #2:
Middle west portion drainage basins consisting of 525 acres. This area drains west through the proposed offsite business area to existing culverts crossing under SR65.
4. Pleasant Grove Creek:
The east and south portion drainage basins consisting of 1013 acres. This area drains southwesterly and leaves the property at various locations to existing sub-tributaries of Pleasant Grove Creek and eventually to culverts crossing under SR65.

The total Project property consists of 1342 acres.

All the drainage basins have been studied by Placer County Flood Control and Water Conservation District (PCFCD).

In addition, the City of Lincoln has prepared a "South Lincoln Master Drainage Plan, (SLMDP) dated August 15, 1998 (more current than the PCFCD's) that applies to portions of Orchard Creek which may be applicable to this Project. Also, the PCFCD has prepared a "Auburn Ravine, Coon, and Pleasant Grove Creeks Flood Mitigation" plan dated June 1993 that applies to portions of Pleasant Grove Creek applicable to this Project. The results of studies conclude that in the Project some areas require detention to pre project conditions to prevent aggravating downstream/upstream flooding problems.

The developed Project acreage will consist of buildings, paved parking with driveways, landscaping, open grassed play areas, some storm water detention basins, open space, parks, schools, residential and commercial/business development, and roadways.

This report contains:

1. Design criteria used;
2. Existing plans and studies relative to the Project;
3. Pre project, post project and post project mitigated drainage flows;
4. Post project drainage mitigation facility approximate sizes;
5. Orchard Creek and Pleasant Grove Creek flood plains in the Project area;
6. Best Management Practice (BMP) Concepts;
7. Detention Facilities and BMP Maintenance Needs;
8. Drainage Release Path concepts; and,
9. Conclusions.

Conclusion

The Project with the proposed mitigation facilities:

1. Will not aggravate downstream runoff or floodplains;
2. Is in conformance with the PCFCD's Stormwater Management Plan, the City of Lincoln's SLMDP, and the PCFCD Pleasant Grove Creek study;
3. Will provide for areas proposed for development to be above the floodplain;
4. Will provide for drainage release paths that will allow drainage around proposed project structures without encroaching on the finished floor; and,
5. Will provide for BMP's to be included with each development as may be required.

EXISTING DRAINAGE PLANS AND FLOOD PLAIN STUDIES

General

There are eight (8) drainage plans and studies that are pertinent to the Project. The plans are:

1. "Auburn Ravine, Coon, and Pleasant Grove Creeks Flood Mitigation"(PGC), dated June 1993, prepared for the Placer County Flood Control and Water Conservation District (PCFD) by CH2MHill;

Portions of these plans applicable to the Project are excerpted and included in Appendix I & G.

2. "Final Report south Lincoln Master Drainage Plan: Auburn Ravine, Ingram Slough and Orchard Creek" (SLMP-AIO), dated August 15, 1998, prepared City of Lincoln, Montgomery Watson, and Civil Solutions.

Portions of these plans applicable to the Project are excerpted and included in Appendix J.

3. "Stormwater Management Manual" (SWM), as revised to October 1997, prepared by the PCFD;

4. Draft "Lincoln Stormwater Management Plan" (Plan95) dated February 1995, prepared by Montgomery Watson.

Portions of these plans applicable to the Project are excerpted and included in Appendix K.

5. "Parcel K Preliminary Drainage Report" dated August 17, 1998, prepared for The Rocklin Project LP by Terrance E. Lowell & Associates

Portions of these plans applicable to the Project are excerpted and included in Appendix D & E.

6. "FEMA" Study's excerpts
 - a. Placer County @ time of study.

Note that these studies, although dated because of more recent hydrologic and hydraulic data, provide useful information relative to stream stations, major culvert locations, and flood plain areas at the time of their studies.

Portions of these plans applicable to the Project are excerpted and included in Appendix C.

7. Caltrans
 - a. Improvement plan excerpts

Portions of these plans applicable to the Project are excerpted and included in Appendix F.

8. "Twelve Bridges, PHI Portion Master Drainage Plan" dated April 1999 prepared by Terrance E. Lowell & Associates.

Orchard Creek Main Channel, reports relative to Project Area

The plans relative to Orchard Creek Main Channel are: PGC, SLMP-AIO, Plan95, FEMA, Caltrans, PHI, and the SWM.

In general, detention is not required on the main channel under developed project conditions. However, because of the adjacent north side development of Twelve Bridges within the City of Lincoln, detention facilities may be needed for flows not to exceed the Twelve Bridges system designs which are based on undeveloped offsite condition flows.

For the purpose of this preliminary study, it is assumed that detention facilities are not required because the Project proposed drainages are directed primarily to offsite open channel areas that pass through the Twelve Bridges site and the Project flows will not have any significant effect on the channels.

Orchard Creek Tributary #2-1, reports relative to Project Area

The plans relative to Orchard Creek Tributary #2-1 are: PGC, SLMP-AIO, Plan95, FEMA, Caltrans, PHI, and the SWM.

In general, detention is not required on the main channel under developed project conditions. However, because of the adjacent north side development of Twelve Bridges within the City of Lincoln, detention facilities may be needed for flows not to exceed the Twelve Bridges system designs which are based on undeveloped offsite condition flows.

For the purpose of this preliminary study, it is assumed that detention facilities are not required because the Project proposed drainages are directed primarily to offsite open channel areas that pass through the Twelve Bridges site and the Project flows will not have any significant effect on the channels.

Pleasant Grove Creek reports relative to Project Area

The plans relative to Pleasant Grove Creek are: PGC, Caltrans, PHI, and the SWM.

In general, detention is required on the main channel under developed project conditions.

SWM relative to all Watersheds

The SWM is relative to all watersheds studied. It provides methodology and criteria for the design of facilities and detention facility sizing, and rainfall amounts and distribution for use in ungaged drainage basins.

Where other reports have been prepared subsequent to the SWM such as the PGC, SLMP-AIO, PHI, Caltrans, and Plan95, these plans shall govern in lieu of the SWM where a conflict may occur. The reason for this is that the other plans provide for a master area coordinated plan and in some cases, detention is not required where the SWM would require detention.

DESIGN CRITERIA

General

Existing and proposed system drainage flows and facilities are calculated and will be designed in accordance with:

1. The Placer County Flood Control and Water Conservation District's Stormwater Management Manual, version February 1994 & October 1997 amendments (SWM);
2. City of Rocklin requirements;
3. Applicable drainage master plans PGC, SLMP-AIO, Plan95, Caltrans, PHI, and FEMA; and
4. Industry standard practice.

The SWM requires post project objective flows for 2-year, 10-year and 100-year storm events to be less than pre-project flow conditions unless master drainage plans indicate otherwise. The Project will be designed to conform to the post project objective SWM flow requirements unless otherwise noted.

The following sections describe the various components of the design methodology.

Hydrologic calculation method

The HEC-1 2000 point program was used to calculate the peak flows for the 2-year through 100-year storm event. For the studied ungaged subbasins, precipitation used was developed using the SWM theoretical information. The routing methods used are the Kinematic Wave for overland flow and Modified Muskingum-Cunge for channels. Two overland flow routings were used per subbasin, one for pervious areas and one for impervious areas including paved and roofed areas. The initial and uniform loss rate method was used to determine precipitation loss due to interception and infiltration.

Existing and post project detention storage basin volumes were calculated using surface storage area at various storage elevations. Detention basin outlet control facilities were calibrated for the various storage elevations determined above using existing or proposed pipes as applicable. Inlet or outlet

control conditions were applied depending on the pipe slope and downstream tailwater. The detention storage area, elevation, and outflow capacity data was then included in the HEC-1 project runs for calculation of project outlet flows under pre-project and post-project mitigated conditions.

For HEC-1 input, the following were used for friction values for pre and post Project conditions:

Sheet flow:	impervious pervious	N = 0.11 N = 0.40 to 0.70 depending on location
Channel flow:	impervious pervious	n = .015 to 0.16 n = .03 to 0.06 depending on location and use
CMP: Concrete/Plastic		n = .024 n = .012 to .015

Precipitation

Precipitation is based on the SWM depth-duration-frequency versus elevation tables prepared for Placer County. Precipitation input into the HEC-1 models was developed using the Placer County Design Precipitation Program (PDP). This program uses elevation and subbasin centroid x and y coordinates to center a storm with a given return period over a specified subbasin and then produces HEC-1 precipitation input (PI cards) for each subbasin in the model. Although the drainage basins are larger than 200 acres, the storm basin centering application was not used in this study and is conservative for sizing of facilities. An elevation of 275 feet was used for determination of the rainfall amounts for all basins studied.

The maximum precipitation occurs within the maximum 1-hour of rainfall near the center of the total storm time selected.

A 24-hour rainfall, in 5-minute increments was developed using the PDP program, and input into a HEC-1 basin calculation. The PDP program includes the peak incremental rainfall that occurs. The HEC-1 program model used 1-minute intervals (by interpolation) for a period of 1440 minutes (24-hours) for developed watersheds. Since the Project drainage subbasins studied have a relatively short time of concentration, e.g. -minutes to 1-hour, the peak rainfall and peak runoff occurs within the 24-hour storm event. A storm event longer than 24 hours will not increase peak runoff quantities.

The following is the rainfall depth-duration for a 100-year frequency event at an elevation of 275 feet and maximum cloudburst amounts:

<u>Time</u>	<u>Rainfall Inches</u>	<u>Equivalent Inches/Hour</u>
5 minute	0.44 inches	5.23
10 minute	0.61 inches	3.69
15 minute	0.73 inches	2.91
30 minute	0.95 inches	1.90
1 hour	1.24 inches	1.24
2 hour	1.64 inches	0.82
3 hour	1.91 inches	0.64
6 hour	2.34 inches	0.40
12 hour	3.49 inches	0.30
1 day	4.55 inches	0.19

Hydrologic Soils Group and Infiltration Rates

The hydrologic soil groups and infiltration rates are used to develop the HEC-1 initial and uniform loss rates. These losses are deducted from the rainfall; the excess rainfall results in stormwater runoff. A negative excess is not allowed.

Initial loss is defined as all rainfall lost until a specified amount is satisfied. No stormwater runoff results until the specified amount is exceeded. For example, if 1-inch per hour of rain were to fall for 6 hours for a total of 6-inches on a pervious material, and the initial loss was estimated to be 4-inches, no runoff would result for the first 4 hours of rainfall.

For the area, an initial loss rate of zero "0" is used for pervious and impervious areas. This would be the case for an area that has been subject to prior storms and the ground and depressions already saturated.

The uniform loss rate takes effect after initial losses are satisfied. Uniform loss rates were calculated using SCS and SWM information as follows:

The soil hydrologic characteristics were determined using information contained in the Soil Survey of Placer County, California, Western Part, prepared by USDA and SCS in Cooperation with UC Agricultural Experiment Station (SCS), issued July 1989 based on a 1973 survey.

See Appendix A for applicable SCS map and table excerpts.

The SCS quadrangle maps that cover the study area are #'s 13 (Roseville) and 14 (Rocklin). The portion of the SCS maps shows the area soil numbers in the Project drainage sheds Orchard Creek main channel and Tributary 2-1 as #'s 104, 105, 144, 145, 152, 153, and 154. Table 13 of the SCS report lists the hydrologic group for all these soil as D for map soil number shown. The portion of the SCS maps shows the area soil numbers in the Project drainage shed for Pleasant Grove Creek as #'s 106, 107 (SCS group C), #'s 145, 153, 154 (SCS group D), and # 194 (SCS group B). Hydrologic soil groups are used to estimate a soil's water intake capability after the soil has been wetted and has received precipitation from long duration storms.

Using Table 5-4 of the SWM, a constant infiltration rate was estimated for the SCS hydrologic soil groups between 0.07 and 0.09 (group D) and 0.12 (group B) inches/hour for pervious areas depending on location under pre and post project conditions. The same infiltration were used under pre and post project conditions to reflect the underlying soil condition as being dominant with the landscaping material assumed to be shallow and saturated.

A constant infiltration rate of 0.0 inches/hour is used for all impervious areas including paved roads, paved walkways, roofed areas and detention areas.

Because of a HEC-1 version 4.0.1E program limitation, it was necessary to show at least 1% impervious or 1% pervious area where two runoff characteristics in a subbasin were included. However, this amount is so small it is considered to have an insignificant affect on basins with no impervious area.

Hydraulic Design Criteria – Culverts and Channels

When facilities are designed for improvement plans the following criteria applies for hydraulic systems for curbs and gutters, drainage inlets and manholes, drainage pipes, and overflow channels and shall conform to the SWM and as follows.

Hydraulic criteria used for roughness coefficients in the design of culverts, channels and in backwater analysis may be different than those used in the HEC1 program. Where different, the roughness coefficients used in HEC1 are generally less than those used in the hydraulic design. The reason for the difference is that a smoother HEC1 roughness coefficient will almost always result in a larger runoff amount than when a rougher coefficient is used. This results in conservative flow values used in the design of the major drainage systems. Then in the design of the major and minor drainage systems, the higher roughness coefficient (where it occurs) combined with the HEC1 flows noted above, provide conservative results with regards to the hydraulic grade line (HGL) calculated.

1A. Curbs and gutters Arterial classed roads per SWM Table 6-1:

- a. Continuous slope areas: 100-year storm, maximum elevation less than 6-inches over sidewalk; all travel lanes clear of stormwater flow; bike lanes allowed to be inundated; stormwater flow contained in right-of-way.
- b. Sag areas: Same as continuous slope areas.

1B. Curbs and gutters for Collector classed roads per SWM Table 6-1:

- a. Continuous slope areas: 10-year storm, traveled way free of water; 25-year storm, water not above back of sidewalk elevation or greater than 6" deep in traveled way; 100-year storm, stormwater contained within right-of-way, center 12-feet of road clear, a water flow cannot exceed 3-feet/second.

- b. At sag points: 10-year storm, water not above back of sidewalk or greater than 6-inches deep in travelled way; 25-year storm, maximum elevation less than 4-inches above top of curb and less than 6" deep in travelled way; 100-year storm, stormwater contained within right-of-way, center 12-feet of road clear, water flow cannot exceed 3-feet/second, maximum depth over sidewalk 6".
- 2. Drainage inlets (closed system)
 - a. At design storm, 10-year event, inlets assumed 50% blocked.
 - b. Hydraulic grade line (HGL): at 10-year storm, HGL minimum of 6-inches below top of gratings, inlets, and manhole covers.
 - c. Maximum spacing 500-feet between inlets.
- 3. Drainage pipes
 - a. Minimum pipe velocities 2 1/2 feet/second computed using Mannings formula for pipes flowing full;
 - b. Slopes less than 70% of critical slope or more than 130% of critical slope at design flow for pipes not under pressure flow;
 - c. Mannings "n" per SWM Table 6-3 and as follows.
 - 1. all culverts except CSP 0.015
 - 2. CSP 0.024
 - 3. concrete curb and gutter 0.016
 - 4. graded shoulders & ditches 0.030
- 4. Drainage channel and overflow release channel
 - a. per SWM Section VIII, and culverts less than 5 square feet in area completely blocked;
 - b. 100-year event flow with HGL 1-foot minimum below pad elevation.
- 5. Entrance loss coefficients @ manholes, drop inlets, culvert pipe inlets.
 - a. 0.2 @ minor structures; to 1.5 @ drop and culvert inlets;
 - b. Loss coefficients also consider and include hydraulic losses due to change in both volume and direction of flow.

Hydraulic Design Criteria – HEXRAS Backwater Analysis

A HECRAS program (replaces HEC-2) is used to calculate the 100-year flood plains for the major channels. The HECRAS program used for this Project is included in a BOSS program within AutoCadd14. The BOSS HECRAS program allows the development of the cross sections and plotting of the flood plain without the need of separate hand input. The BOSS program utilizes all the HECRAS criteria and formatting.

Program input after creation of the cross sections include:

- a. "n" values:
 1. For channel locations between overbank areas: 0.03 to 0.07 depending on location and estimated potential for shrubbery and tree growth;
 2. For overbank areas: 0.10
- b. Beginning and ending station starting HGL's calibration calculated at various flows either outside or inside the program depending upon location:
 1. Utilizing existing FEMA flow and other study information;
 2. For subchannels: main channel HGL elevations for a particular storm event for the nearest downstream cross section;
 3. At road crossings: inside program or outside program HGL elevation calculation;
 4. Overbank width limitation was developed from the proposed large lot boundaries to contain the floodplain within the open space area where the boundaries would limit the spread of flooding. Large lot grading will be used to contain flows to the proposed open space areas.

Overflow Drainage Release Paths

Overflow release channels will be incorporated into the design when each large lot subdivision is further divided or developed. The release paths will be made to provide for the 100-year storm event to be released through the subdivision, assuming local inlets 100% blocked, without flooding of adjacent building pads.

The release paths may be in proposed road sections and or easements that access the major channels.

Release paths to sag points in roads will be released through median or over curb/sidewalks to access natural or design drainage channels.

Major channel under road drainage structures are assumed not to be blocked and are assumed to be part of the drainage release path.

Design calculations for the drainage release paths will be provided with each construction project in accordance with the above criteria.

PRE PROJECT CONDITIONS

General

The preproject drainage basin areas are shown on Figures 1A and 1B. The subbasin characteristics are included in Table 1.

The existing basin areas studied drain a total of 1801 acres. A summary of the onsite and offsite acreage for each of the four drainage basin areas studied is shown in Table 2.

The Project areas are all undeveloped except for portions of SR65 and a portion of the area near Sunset Boulevard known as Herman Melville.

Existing Culverts and Ponds

Existing major culverts and ponds are located at eleven (11) locations and their storage and outfall capacity are summarized in Table 4

Capacity calculations for each of the above existing facilities are included in Appendixes H for the locations noted above.

Results

HEC-1 results for the drainage shed areas and storm events studied are summarized in Table 5.

The HEC-1 run results calculations for the 2-year through 500-year event are included in the Appendix L and on computer disk in Appendix R.

POST PROJECT CONDITIONS (unmitigated)

General

Post project subbasin drainage areas studied are shown on Figures 2 except for the southwest basins of Pleasant Grove Creek tributary which is shown on Figure 1A. Subbasin characteristics are tabulated in Table 3.

The Project area and the offsite downstream areas are developed consisting of single family, multifamily, commercial/business, parks, schools, and buildings, roads, drainage facilities, paved parking areas, and open space.

Onsite drainage facilities will consist of drainage inlets and pipes with stormwater discharge to natural and/or reconstructed channels.

Proposed Culverts and Ponds

Proposed major culverts and ponds are located at the same preproject eleven (11) locations, and their storage and outfall capacity are summarized in Table 4. Their characteristics under preproject unmitigated conditions are assumed for this study to be the same as under preproject conditions.

Proposed major culverts and ponds, are located at the following locations:

Capacity calculations for each of the above existing facilities are included in Appendix H.

Results

HEC-1 results for the drainage shed areas and storm events studied are summarized in Table 5.

Under the unmitigated conditions studied, no major roads or SR65 become overtopped.

The HEC-1 run for the 2-year through 500 year events are included in the Appendix M and on disk in Appendix R.

POST PROJECT CONDITIONS MITIGATED

General

The SWM requires that post Project flows not be greater than pre project conditions and objective flows unless an adopted Master Plan indicate otherwise.

For the Project area and drainage basins studied, sheds that may require detention are:

a. **Orchard Creek Main Channel**

In accordance with the Lincoln Master Plan no detention required is required. However, detention may be required at some locations if the adjacent north side Twelve Bridges PHI proposed developed drainage facilities are inadequate to accept the Project flows.

For the purpose of this preliminary study, it is assumed that detention facilities are not required because the Project proposed drainages are directed primarily to offsite open channel areas that pass through the Twelve Bridges site and the Project flows will not have any significant effect on the channels

b. **Orchard Creek Tributary #2-1**

In accordance with the Lincoln Master Plan no detention required is required. However, detention may be required at some locations if the adjacent north side Twelve Bridges PHI proposed developed drainage facilities are inadequate to accept the Project flows.

For the purpose of this preliminary study, it is assumed that detention facilities are not required because the Project proposed drainages are directed primarily to offsite open channel areas that pass through the Twelve Bridges site and the Project flows will not have any significant effect on the channels

c. **Orchard Creek Tributary #2**

This basin requires detention in order to not increase downstream flows to the west side of

SR65. The existing culvert at SR65 is adequate for undetained flows. However, in order to reduce post project flows to preproject conditions or less, detention is required.

d. **Pleasant Grove Creek**

The Pleasant Grove Creek basins require detention in order to not increase downstream flow to adjacent properties. In order to reduce post project flows to preproject conditions or less, detention is required.

Where detention is required, the SWM criteria requires that post project flows be mitigated to less than preproject conditions for the 2-year, 10-year and 100-year event flows. The SWM post project objective flows are based on a variable amount per SWM Figure 7-1 depending on the flow increase from pre Project to post Project unmitigated flow amounts. The post project object flow varies from a maximum of one (1.00) times the preproject flow to 0.90 times the preproject flow.

The post Project objective flows were calculated for each of the storm events studied per the SWM Figure 7-1 and are summarized in Table 5.

The post project drainage basin areas, amount of development and characteristics are the same as post project unmitigated conditions.

Mitigation Detention Basins

The mitigations proposed are tabulated in Table 6. channel.

Mitigation facility sketch and calibrations for surface storage basin volumes, elevations and outlet flows are included in Appendix P. Note that the eleven Ponds included in the pre and post Project unmitigated are to remain except as may be modified or incorporated into a proposed detention basin for mitigation measures.

The mitigated discharge flows from the proposed project outlets are less than predevelopment conditions and the SWM objective flows for the 2-year through the 100-year events studied. These results show that the proposed mitigation detention basins are adequate for the projected flows.

The HEC-1 results for all flow events studied are summarized in Table 5.

The HEC-1 output for the 2-year through 500-year storm events are included in the Appendix N and on disk in Appendix R.

FLOOD PLAINS

General

The 100-year flood plains for the post project mitigated conditions are shown on Figure 3 for major channel locations.

Flood plains were not calculated for smaller basin drainage ways as they are in steeper terrain open space areas where there is no floodplain effect to adjacent property from the intended flows.

The HECRAS output for the 100-year event is included in Appendix Q and on disk in Appendix R

BEST MANAGEMENT PRACTICE (BMP) FACILITIES

BMP area facilities will be developed in accordance with agency requirements at the time construction projects are proposed.

The BMP's will be designed using the California Storm Water BMP Handbook, March 1993 as amended, Municipal Handbook prepared by McKee, et al, for the Stormwater Task force or industry standard practice to meet each developments need.

DETENTION FACILITIES

and

BMP MAINTENANCE RECOMMENDATIONS

Detention and BMP facilities including diversion structures, diversion channels, detention basins, detention basin outlet structures, and outlet pipes will require observation and maintenance.

Periodic inspections need to be made before the onset of winter and after major storm events and more often to:

1. Verify no debris is blocking inlets, channels, pipes, or structures. Clean if needed.
2. Verify that detention basin is not filling in with sediment or debris that would reduce its capacity. Remove sediment and debris as required to maintain capacity.
3. Verify that overflow spill path is free of blocking debris and will allow flow without jeopardizing Project structures.
4. Repair areas that may become damaged due to excessive flows or debris/sediment buildup.

More specific recommendations will be included when design systems are proposed for construction.

RETENTION QUANTITY REQUIREMENTS

PCFCD as has the City of Lincoln (SLMP-AIO) has prepared a study prepared to attenuate increased volume of runoff attributable to new impervious areas created by new developments. The volume changes are related to the 8-day 100-year storm. The purpose of the retention basin is to reduce the additional new volumes effect on downstream Sutter County facilities.

The total new hard surface (impervious areas) to be created by the proposed developments is 891 acres.

Table 2 summarizes the areas by major shed and developer for total impervious acres (new and existing).

The areas of hard surface created is based the impervious area increase from pre development to post development. Tables 1 and 3 include an additional breakdown of the impervious acreages by subbasins based upon existing and proposed land uses.

The location and cost sharing for the retention basins has not been completely defined at this time.

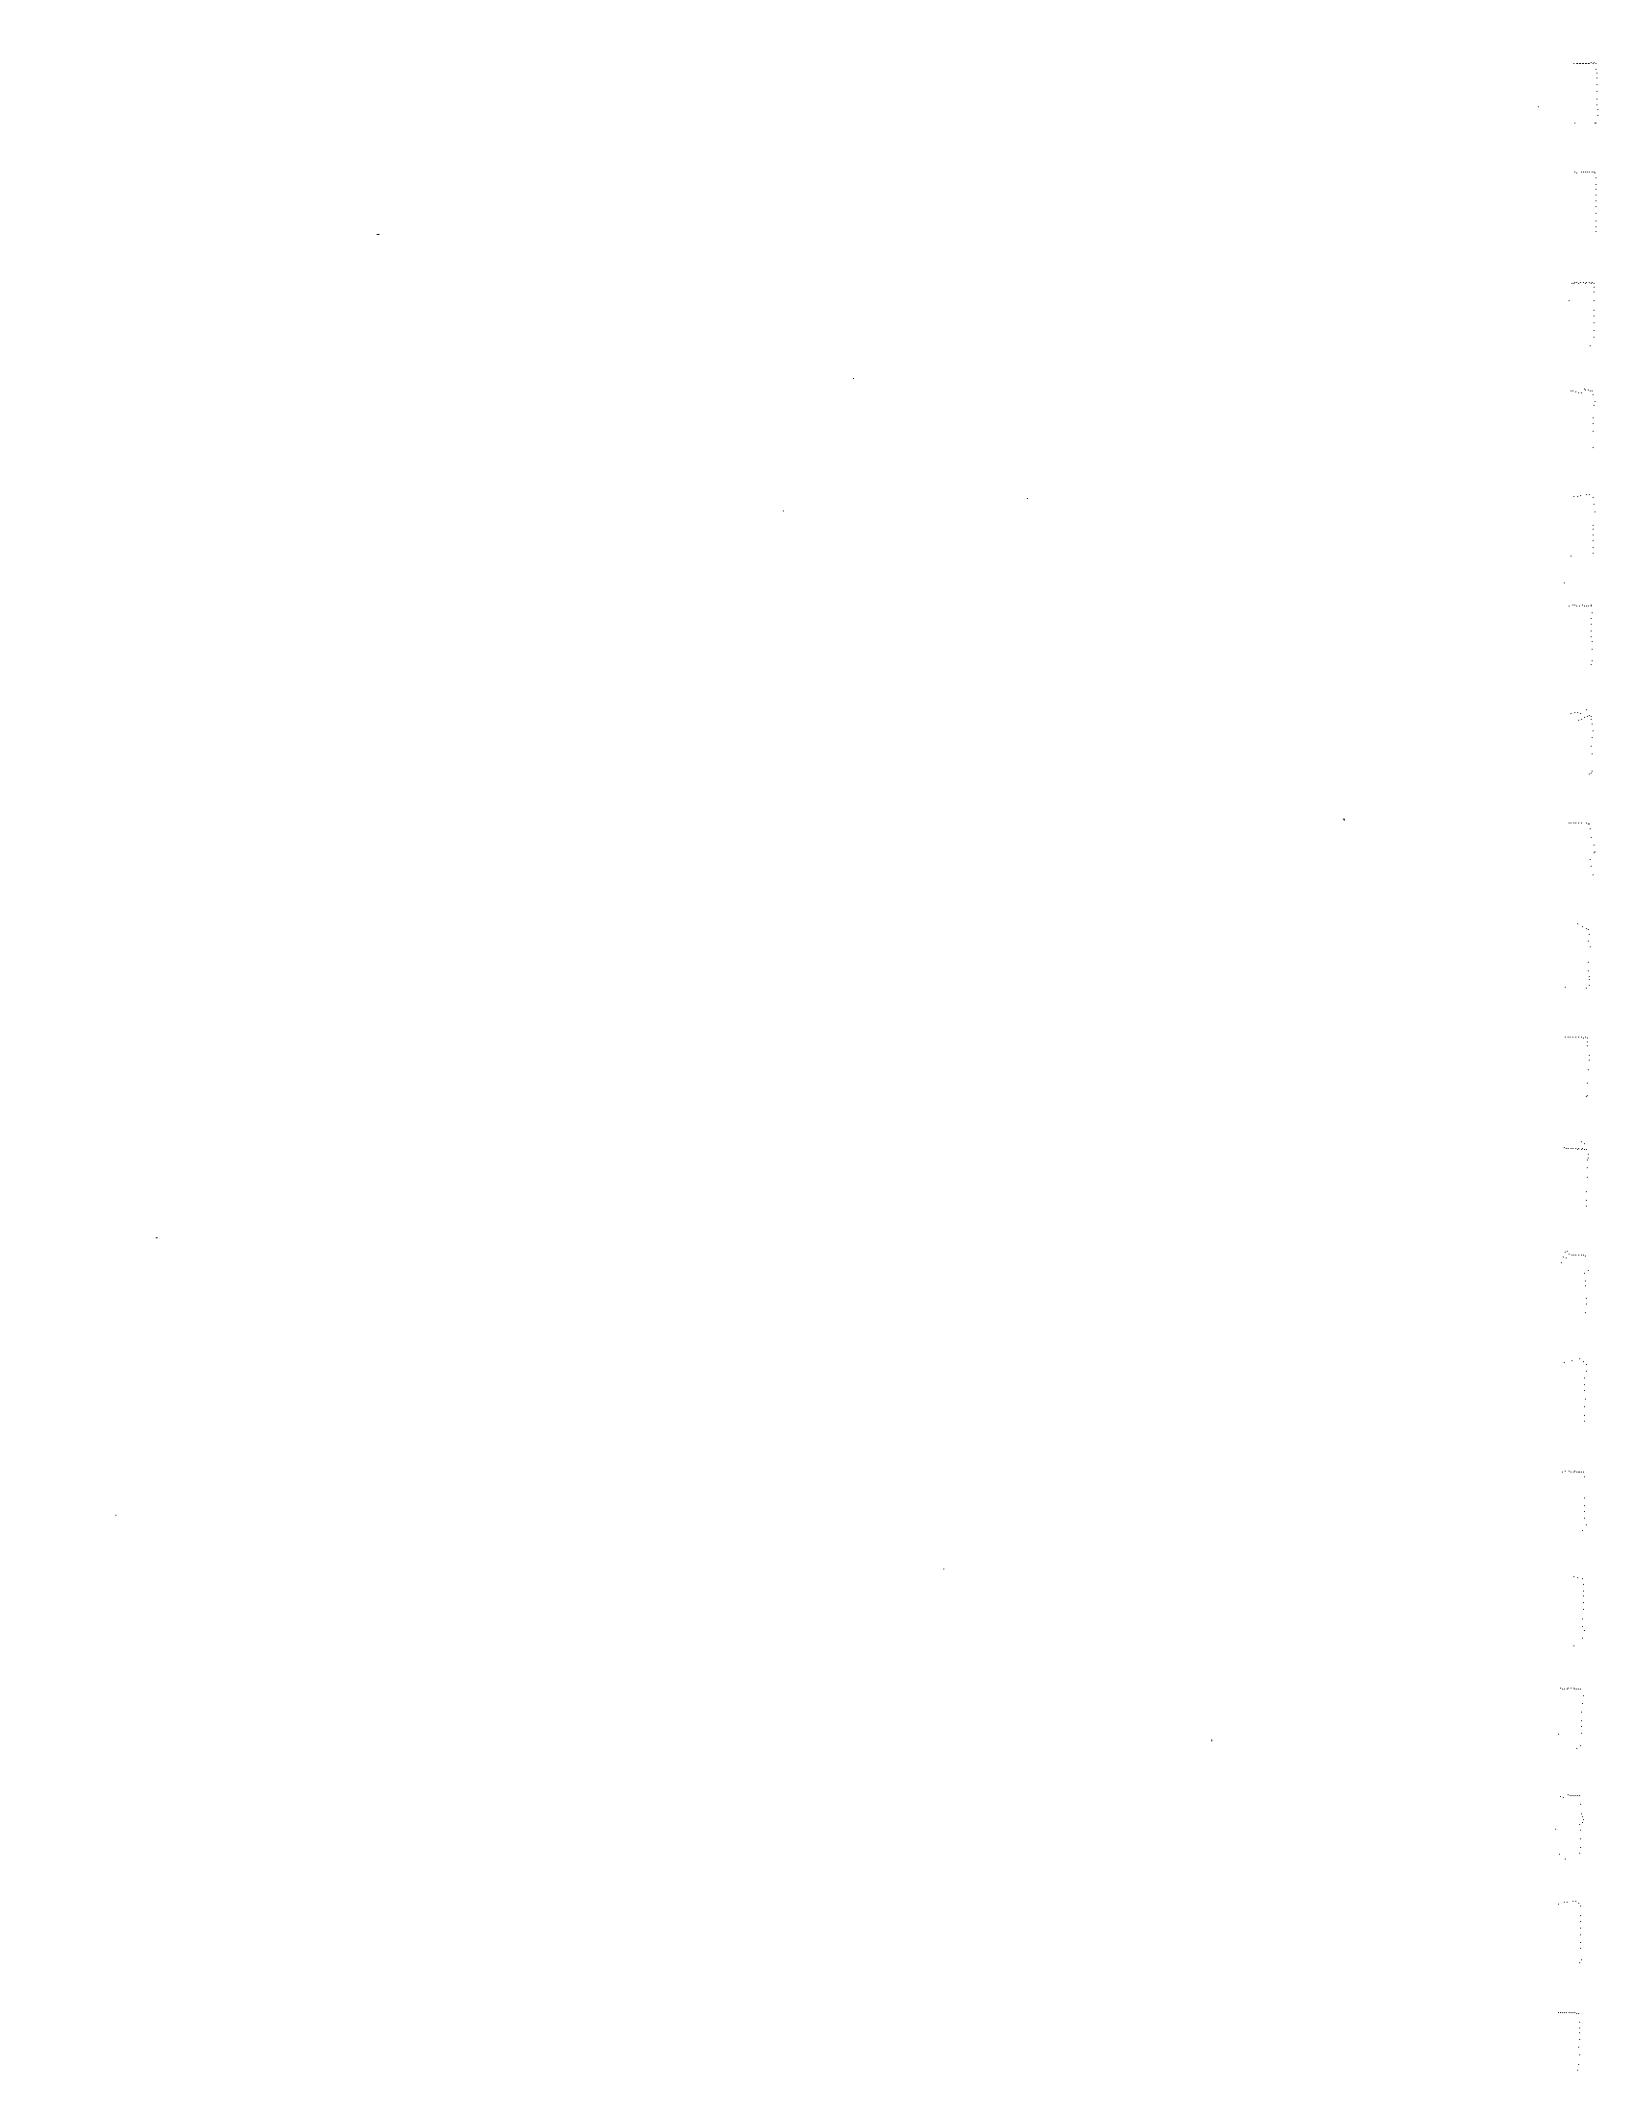

The City of Lincoln in its SLMP-AIO is proposing a 390 acre foot retention basin for areas to be developed within the City of Lincoln which drain areas of Orchard Creek and Ingram Slough. The Project area developed hard surface in the Orchard Creek drainage shed is not included in the 390 acre foot retention basin area.

The hard surface area that drains to the City of Rocklin is in the Rocklin jurisdiction. The method of mitigating this drainage shed areas new development hard surface area is subject to the City of Rocklin requirements

CONCLUSIONS

The Project with the proposed mitigation facilities:

1. Will not aggravate downstream runoff or floodplains;
2. Is in conformance with the PCFCD's Stormwater Management Plan, the City of Lincoln's SLMDP, and the PCFCD Pleasant Grove Creek study;
3. Will provide for areas proposed for development to be above the floodplain;
4. Will provide for drainage release paths that will allow drainage around proposed project structures without encroaching on the finished floor; and,
5. Will provide for BMP's to be included with each development as may be required.

Appendix I

Acoustical Terminology

APPENDIX I: ACOUSTICAL TERMINOLOGY

Acoustics	The science of sound.
Ambient Noise	The distinctive acoustical characteristics of a given space consisting of all noise sources audible at that location. In many cases, the term ambient is used to describe an existing or pre-project condition such as the setting in an environmental noise study.
Attenuation	The reduction of an acoustic signal.
A-Weighting	A frequency-response adjustment of a sound level meter that conditions the output signal to approximate human response.
Decibel or dB	Fundamental unit of sound, A Bell is defined as the logarithm of the ratio of the sound pressure squared over the reference pressure squared. A Decibel is one-tenth of a Bell.
CNEL	Community Noise Equivalent Level. Defined as the 24-hour average noise-level with noise occurring during evening hours (7 – 10 p.m.) weighted by a factor of three and nighttime hours weighted by a factor of 10 prior to averaging.
Frequency	The measure of the rapidity of alterations of a periodic signal, expressed in cycles per second or hertz.
L_{dn}	Day/Night Average Sound Level. Similar to CNEL but with no evening weighting.
L_{eq}	Equivalent or energy-averaged sound level.
L_{max}	The highest root-mean-square (RMS) sound level measured over a given period of time.
Loudness	A subjective term for the sensation of the magnitude of sound.
Noise	Unwanted sound.
Peak Noise	The level corresponding to the highest (not RMS) sound pressure measured over a given period of time. This term is often confused with the "Maximum" level, which is the highest RMS level.

**Threshold
of Hearing**

The lowest sound that can be perceived by the human auditory system, generally considered to be 0 dB for persons with perfect hearing.

**Threshold
of Pain**

Approximately 120 dB above the threshold of hearing.

Presence: Presumed Extant Symbol Type: POINT Meridian: M
Trend: Unknown Radius: 80 meters Elevation: 125 ft
Main Source: WARENYCIA, D. 1998 (OBS)
Quad Summary: ROSEVILLE (3812173/528D)
County Summary: PLACER
SNA Summary:
Location: ON THE WEST SIDE OF THE SOUTH BRANCH OF PLEASANT GROVE CREEK, BETWEEN FOOTHILLS BLVD AND WOODCREEK OAKS BLVD, ROSEVILLE.

Comments:
Distribution: SITE IS LOCATED ALONG THE BORDER BETWEEN WOODCREEK GOLF COURSE AND HEWLETT-PACKARD.
Ecological: HABITAT CONSISTS OF RIPARIAN/OAK WOODLAND, DOMINATED BY BLUE OAKS AND INTERIOR LIVE OAKS.
Threat: THREATENED BY ENCRISING DEVELOPMENT ALONG WOODCREEK OAKS BLVD.
General: SITE WAS VISITED WEEKLY, MAR-JUL 1998; ADULT COURTSHIP TO 5 BEGGING FLEDGLINGS OBSERVED. KITES DID NOT NEST AT THIS LOCATION IN 1999, POSSIBLY DUE TO BOTH GREAT HORNED OWLS AND AMERICAN KESTRELS NESTING NEARBY.

 Quad Summary: PLEASANT GROVE (3812174/528C)
 County Summary: PLACER
 SNA Summary:
 Location: USAF LINCOLN COMMUNICATIONS FACILITY; ABOUT 0.4 KM NE OF MOORE ROAD INTERSECTION WITH WESTERN SITE BOUNDARY.
 Comments:
 Distribution: THE LINCOLN COMMUNICATIONS FACILITY ENCOMPASSES ABOUT 231 ACRES WITH ABOUT 236 VERNAL POOLS. 36 POOLS WERE SAMPLED DURING 1995. LINDERIELLA WAS FOUND IN ONLY 6 POOLS.
 Ecological: A NATURAL VERNAL POOL INTERSPERSED AMONG ANNUAL GRASSLAND AND OAK WOODLAND/SAVANNAH HABITAT. SURROUNDING AREAS HAVE GRAZING & RICE FARMING.
 Threat: SOME GRAZING.
 General: POOL #59: MUD BOTTOM POOL. ESTIMATED LENGTH WAS 40 FEET, WIDTH WAS 20 FEET, DEPTH WAS 24 INCHES. SPECIES OBSERVED ON 2/9/1995, BUT NOT 3/1 OR 3/15/95. COPEPODS, OSTRACODS AND FLATWORMS ALSO PRESENT.
 Owner/Manager: DOD-LINCOLN COMMUNICATIONS FAC

Occurrence No. 57 Map Index:32510 ---Dates Last Seen--- Lat/Long: 38°40'00" / 121°24'57" Township: 09N

Comments:
Distribution: LOCATED ABOUT 0.5 MILE SOUTHWEST OF GIBSON RANCH COUNTY PARK, NORTH OF DRY CREEK.
Ecological: GROWING ON BORDER OF A CREATED PONDED DEPRESSION IN ASSOCIATION WITH GRATIOLA EBRACTEATA, DOWNINGIA ORNATISSIMA, AND ELEOCHARIS MACROSTACHYA. THIS IS NOT A TYPICAL VERNAL POOL BUT A SEMI-PERMANANT MARSH WITH WILLOWS AND TULES.
Threat: DEVELOPMENT IS PLANNED FOR THIS SITE.
General: 50 PLANTS OBSERVED IN 1991. WETLAND MITIGATION FOR THE PROPOSED DEVELOPMENT COULD INCLUDE RETENTION OF THIS POPULATION. SITE A SUBDIVISION IN 1997; FORMER POP SITE IS NOW NEAR E END OF RUSHING RIVER CT OFF OF CHERRY BROOK DR.
Owner/Manager: PVT
